Forget the rule book and relive one of the most exciting race series ever with Can-Am 50th Anniversary! The first rule of Can-Am: There are no rules. Or at least damn few rules. The bodywork had to enclose the wheels and there had to be something that loosely resembled a passenger seat--if your passenger was a badly misshapen human or perhaps a lab monkey. Otherwise, set your racing mind free. No limits to engine options or output, no restrictions on aerodynamic aids or body shape. It was as close to unrestricted road racing as racing had ever gotten or would ever get again. And it was fantastic. From its introduction in 1966 to the end of its classic period in 1974, North America's Can-Am series was the most exciting, technologically advanced, and star-studded racing series of the day. Its essentially rules-free formula attracted everyone from crazed backyard engineers to specialists like McLaren, Chaparral, Shadow, and Lola to manufacturers like Ford, Ferrari, Chevrolet, and Porsche. Top drivers including Mario Andretti, Jackie Stewart, Parnelli Jones, Bruce McLaren, Denis Hulme, Dan Gurney, Phil Hill, Mark Donohue, Peter Revson, Jim Hall, Jody Scheckter, Chris Amon, George Follmer and

John Surtees competed on tracks across the US and Canada taking time off from Formula One schedules and other duties to drive in Can-Am because the racing and the cars were so exciting. Can-Am 50th Anniversary offers a heavily illustrated look back at what is arguably the greatest race series ever to grace the roadracing circuits of North America. Photographer Pete Biro was Goodyear Tire­s official photographer and followed the series throughout the entire run from 1966-'74. The vast majority of the book­s images are unpublished or long out of circulation. Biro brings his unique perspective and his close relationship with the drivers, team owners, and constructors to bear on the captions while former AutoWeek editor George Levy provides an exciting text reflecting the thrill of Can-Am racing.

As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, 'fess up."

The ability to bring new and innovative products to market rapidly is the prime critical competence for any successful consumer-driven company. All industries, especially automotive, are slashing product development lead times in the current hyper-competitive marketplace. This book is the first to thoroughly examine and analyze the truly effective product development methodology that has made Toyota the most forward-thinking company in the automotive industry. Winner of the 2007 Shingo Prize For Excellence In Manufacturing Research! In *The Toyota Product Development System: Integrating People, Process, and Technology*, James Morgan and Jeffrey Liker compare and contrast the world-class product development process of Toyota with that of a U.S. competitor. They use extensive examples from Toyota and the U.S. competitor to demonstrate value stream mapping as an extraordinarily powerful tool for continuous improvement. Through examples and case studies, this book illustrates specific techniques and proven practices for dealing with challenges associated with product development, such as synchronizing multiple disciplines, multiple function workload leveling, compound process variation, effective technology integration, and knowledge management. Readers of this book can focus on optimizing the entire product development value stream rather than focus on a specific tool or technology for local improvements.

Hormones and Atherosclerosis covers the proceedings of the conference held in Brighton, Utah on March 11-14, 1958. The book focuses on the role of hormones in atherosclerosis, as well as cholesterol metabolism and biosynthesis, lipogenesis, and lipid transport. The selection first discusses the biosynthesis of cholesterol and aspects of the biosynthesis of cholesterol from mevalonic acid. Discussions focus on components of liver homogenates and coenzymes required for squalene and sterol synthesis from mevalonic acid and preservation of enzymes and microsomes. The text also ponders on the formation and metabolism of bile acids under different conditions and thyroid function, thyroxine analogs, and cholesterol metabolism in rats and rabbits. The book elaborates on the comparison of the participations of fibroblasts and reticuloendothelial cells in the synthesis and metabolism of cortisol and cholesterol and control of aortal lipid metabolism and lipid movement by hormones and vitamins. The manuscript also examines the influence of estrogens on lipids and

atherosclerosis in experimental animals and the effect of adrenals, pituitary, liver, and mucopolysaccharides on blood lipids. The selection is a dependable reference for readers interested in the relationship of hormones and atherosclerosis.

Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption--the amount of fuel consumed in a given driving distance--because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.
