Studies in the History of General Relativity

After learning that her life's purpose is to fulfill a prophecy to save our world, Roam finds that she is pregnant- and missing the love of her life with all of her heart. Logan, her best friend, stands by her, helping her to find a way back to West despite his own love for her. On a journey that will take her to another body and life in 1955 and, eventually, to another world, Roam will discover that before she can rise and protect our world and her child from an immortal evil she must fall.

The Promise

The Culture and Philosophy of Ridley Scott, edited by Adam Barkman, Ashley Barkman, and Nancy Kang, brings together eighteen critical essays that illuminate a nearly comprehensive selection of the director's feature films from cutting-edge multidisciplinary and comparative perspectives. Chapters examine such signature works as Alien (1979), Blade Runner (1982), Thelma and Louise (1991), Gladiator (2000), Hannibal (2001), Black Hawk Down (2001), and American Gangster (2007). This volume divides the chapters into three major thematic groups: responsibility, remembering, and revision; real, alienated, and ideal lives; and gender, identity, and selfhood. Each section features six discrete essays, each of which forwards an original thesis about the film or films chosen for analysis. Each chapter features close readings of scenes as well as broader discussions that will interest academics, non-

specialists, as well as educated readers with an interest in films as visual texts. While recognizing Scott's undeniable contributions to contemporary popular cinema, the volume does not shy away from honest and well-evidenced critique. Each chapter's approach correlates with philosophical, literary, or cultural studies perspectives. Using both combined and single-film discussions, the contributors examine such topics as gender roles and feminist theory; philosophical abstractions like ethics, honor, and personal responsibility; historical memory and the challenges of accurately rendering historical events on screen; literary archetypes and generic conventions; race relations and the effect of class difference on character construction; how religion shapes personal and collective values; the role of a constantly changing technological universe; and the schism between individual and group-based power structures. The Culture and Philosophy of Ridley Scott assembles the critical essays of scholars working in the fields of philosophy, literary studies, and cultural studies. An international group, they are based in the United States, Canada, Argentina, Italy, Greece, Korea, the United Kingdom, and New Zealand. The guiding assumption on the part of all the writers is that the filmmaker is the leading determiner of a motion picture's ethos, artistic vision, and potential for audience engagement. While not discounting the production team (including screenwriters, actors, and cinematographers, among others), auteur theory recognizes the seminal role of the director as the nucleus of the meaning-making process. With Scott an active and prolific presence in the entertainment industry today, the timeliness of this volume is

Opera is the fastest growing of all the performing arts, attracting audiences of all ages who are enthralled by the gorgeous music, vivid drama, and magnificent production values. If you've decided that the time has finally come to learn about opera and discover for yourself what it is about opera that sends your normally reserved friends into states of ecstatic abandon, this is the book for you. Opera 101 is recognized as the standard text in English for anyone who wants to become an opera lover--a clear, friendly, and truly complete handbook to learning how to listen to opera, whether on the radio, on recordings, or live at the opera house. Fred Plotkin, an internationally respected writer and teacher about opera who for many years was performance manager of the Metropolitan Opera, introduces the reader (whatever his or her level of musical knowledge) to all the elements that make up opera, including: A brief, entertaining history of opera; An explanation of key operatic concepts, from vocal types to musical conventions; Hints on the best way to approach the first opera you attend and how to best understand

what is happening both offstage and on; Lists of recommended books and recordings, and the most complete traveler's guide to opera houses around the world. The major part of Opera 101 is devoted to an almost minute-by-minute analysis of eleven key operas, ranging from Verdi's thunderous masterpiece Rigoletto and Puccini's electrifying Tosca through works by Mozart, Donizetti, Rossini, Offenbach, Tchaikovsky, and Wagner, to the psychological complexities of Richard Strauss's Elektra. Once you have completed Opera 101, you will be prepared to see and hear any opera you encounter, thanks to this book's unprecedentedly detailed and enjoyable method of revealing the riches of opera.

How and why Lisa's Dad Got to be Famous

A Social History of American Technology, Second Edition, tells the story of American technology from the tools used by its earliest inhabitants to the technological systems--cars and computers, aircraft and antibiotics--that we are familiar with today. Ruth Schwartz Cowan and Matthew H. Hersch demonstrate how technological change has always been closely related to social and economic development, and examine the important mutual relationships between social history and technological change. They explain how the unique characteristics of American cultures and American geography have affected the technologies that have been invented, manufactured, and used throughout the years--and also the reverse: how those technologies have affected the daily lives, the unique cultures, and the environments of all Americans.

Cold and ultracold collisions occupy a strategic position at the intersection of several powerful themes of current research in chemical physics, in atomic, molecular and optical physics, and even in condensed matter. The nature of these collisions has important consequences for optical manipulation of inelastic and reactive processes, precision measurement of molecular and atomic properties, matter-wave coherences and quantum-statistical condensates of dilute, weakly interacting atoms. This crucial position explains the wide interest and explosive growth of the field since its inception in 1987. The author reviews elements of the quantum theory of scattering theory, collisions taking place in the presence of one or more light fields, and collisions in the dark, below the photon recoil limit imposed by the presence of any light field. Finally, it reviews the essential properties of these mesoscopic quantum systems and describes the key importance of the scattering length to condensate stability.

How to Think Seriously About the Planet

A magisterial handbook on water use and water technology in an area from Mesopotamia to the Atlantic Ocean, from the beginning of the Neolithic period up to ca. A.D. 600. Based on the archaeological and written evidence, it discusses the socio-economic background, irrigation and drainage, water supply, water in recreation (fountains, baths, etc.), larger hydraulic works (canals and sluices, dams, drainage), water-power, water legislation and the administration of water resources.

The Culture and Philosophy of Ridley Scott

Humans first used carbon as chars from firewood in ritual paintings and primitive metallurgical processes. Natural forms of carbon have been known since antiquity, yet the knowledge of the carbon element in chemistry and its technical applications on a larger scale are a relatively recent development. The industrial revolution in Europe two centuries ago led the way to the numerous applications of these graphitic forms that are still used today. Graphite and Precursors features short tutorial articles on different topics related to the science and technology of carbons intended for engineers, students of Materials Science and scientists who are seeking a fundamental understanding without "reinventing the wheel." This first volume of the World of Carbon book series focuses on graphite and its precursors, including its origin and various implications. The basic properties

of hexagonal graphite are developed, and several theoretical and experimental approaches explain why this crystalline solid is fascinating in solid state physics. Also featured are the numerous applications connected to thermal, mechanical and chemical graphites, as well as their various industrial uses in polycrystalline form. Finally, carbon precursors are introduced.

The term battleaxe has been used since 1910 when it implied a closely defined type: elderly, resentful, vociferous and certainly no beauty. Here Christine Hamilton presents a banquet of belligerent British belles who, for one reason or another, exude the indomitable spirit that is the hallmark of the battleaxe, and yet who defy that description. Her portraits are admiring and affectionate - a celebration of that special quality that stands certain women apart. The star-studded cast includes Dame Barbara Cartland who when asked if she thought class barriers had broken down, retorted 'Of course they have. If they hadn't, someone like you wouldn't have been interviewing someone like me'; Barbara Woodhouse, famous for her strict approach to both dogs and owners, who once said of the royal Corgis 'I have seen them on a station platform exhibiting dreadful impatience'; no-nonsense Claire Raynor who said of herself 'I'm five foot nine and built like a bus. What can I do about it? Bigger all.' and Dame Irene Ward who on a parliamentary delegation to Nazi Germany in 1936 is said to have exclaimed in stentorian tones
