The series Advances in Polymer Science presents critical reviews of the present and future trends in polymer and biopolymer science. It covers all areas of research in polymer and biopolymer science including chemistry, physical chemistry, physics, material science. The thematic volumes are addressed to scientists, whether at universities or in industry, who wish to keep abreast of the important advances in the covered topics. Advances in Polymer Science enjoys a longstanding tradition and good reputation in its community. Each volume is dedicated to a current topic, and each review

critically surveys one aspect of that topic, to place it within the context of the volume. The volumes typically summarize the significant developments of the last 5 to 10 years and discuss them critically, presenting selected examples, explaining and illustrating the important principles, and bringing together many important references of primary literature. On that basis, future research directions in the area can be discussed. Advances in Polymer Science volumes thus are important references for every polymer scientist, as well as for other scientists interested in polymer science - as an introduction to a neighboring field, or as a compilation of detailed information for the specialist. Review articles for the individual volumes are invited by the volume editors. Single contributions can be specially commissioned. Readership: Polymer scientists, or scientists in related fields interested in polymer and biopolymer science, at universities or in industry, graduate students

From the mouths of customers: what they want, how they want it, and what they'll do if they don't get it There's no way around it. Executives, managers, and strategic thinkers around the globe are grappling with how to transform their organizations from product or service orientation to being customer driven. The 10 Demandments presents an informed and interactive road map that takes readers directly to the hearts, minds, desires, and demands of the new customer, whether it is the end consumer or a business-to-business relationship. In this customer-centric manifesto, customer experience guru Kelly Mooney scrutinizes the total customer experience. "Earn My Trust" . . . "Put Me in Charge" . . . "Inspire Me" . . . Each resulting demandment is a call to action from customers a call that is answered by the book's strategic insights, anecdotes, and action plans.

Still myopically chasing quarterly profits, producing the same product the same way, issuing directives to increasingly disengaged employees? Too many organizations cling to outdated practices-to their detriment and almost certain demise. In today's unpredictable, interconnected world you cannot rely on the old rules of business to get stellar results. The New Corporate Facts of Life charts a clear path through the obstacles facing all companies-disruptive innovation, economic instability, environmental degradation, increasing stakeholder power, and other global forces-explaining exactly how to transform each challenge into competitive advantage. Based on interviews with over 50 top executives and thought leaders, including Coca-Cola Enterprises CEO John Brock, Georgia Tech President G.P. "Bud" Peterson, and author Peter Senge, the book recounts how leading-edge companies have begun re-shaping strategy, culture, vision, engagement, and leadership to succeed in this brave new world. Change is the only constant in business. Packed with inspiring stories and compelling examples, The New Corporate Facts of Life offers a bird's-eye view of the shifting landscape and reveals how any organization, large or small, can begin creating a profitable, sustainable future.

Engineering Mathematics with Examples and Applications provides a compact and concise primer in the field, starting with the foundations, and then gradually developing to the advanced level of mathematics that is necessary for all engineering disciplines. Therefore, this book's aim is to help undergraduates rapidly develop the fundamental knowledge of engineering mathematics. The book can also be used by graduates to review and refresh their mathematical skills. Step-by-step worked examples will help the students gain more insights and build sufficient confidence in engineering mathematics and problem-solving. The main approach and style of this book is informal, theorem-free, and practical. By using an informal and theorem-free approach, all fundamental mathematics topics required for engineering are covered, and readers can gain such basic knowledge of all important topics without worrying about rigorous (often boring) proofs. Certain rigorous proof and derivatives are presented in an informal way by direct, straightforward mathematical operations and calculations, giving students the same level of fundamental knowledge without any tedious steps. In addition, this practical approach provides over 100 worked examples so that students can see how each step of mathematical problems can be derived without any gap or jump in steps. Thus, readers can build their understanding and mathematical confidence gradually and in a step-by-step manner. Covers fundamental engineering topics that are presented at the right level, without worry of rigorous proofs Includes step-by-step worked examples (of which 100+ feature in the work) Provides an emphasis on numerical methods, such as root-finding algorithms, numerical integration, and numerical methods of differential equations Balances theory and practice to aid in practical problem-solving in various contexts and applications

The Ten Demandments

The concept of imitatio - the imitation of classical and vernacular texts - was the dominant critical and creative principle in Italian Renaissance literature. Linked to modern notions of intertextuality, imitation has been much discussed recently, but this is the first book to offer a comprehensive survey of Italian Renaissance ideas on imitation, covering both theory and practice, and both Latin and vernacular works. Martin McLaughlin charts the emergence of the idea, in vague terms in Dante, then in Petrarch's more precise reconstruction of classical imitatio, before concentrating on the major writers of the Quattrocento. Some chapters deal with key humanists, such as Lorenzo Valla and Pico della Mirandola, while others discuss each of the major vernacular figures in the debate, including Leonardo Bruni, Leon Battista Alberti, Angelo Poliziano, and Pietro Bembo. For the first time scholars and students have an up-to-date account of the development of Ciceronianism in both Latin and the vernacular before 1530, and the book provides fresh insights into some of the canonical works of Italian

literature from Dante to Bembo.

The M8 light armored car was the only significant wheeled combat vehicle used by the US Army in World War II. In conjunction with the lightly armed utility version, the M20, it was the staple of the army's cavalry squadrons for use in reconnaissance and scouting. First entering combat in Italy in 1943, it was widely used throughout the campaign in northwest Europe, though its off-road performance was found to be wanting. This title describes the design and development of the M8, covering the many variants that were produced during World War II and afterwards, along with a comprehensive survey of its operational use.

Today, death sentences in the U.S. are as rare as lightning strikes. Brandon Garrett shows us the reasons why, and explains what the failed death penalty experiment teaches about the effect of inept lawyering, overzealous prosecution, race discrimination, wrongful convictions, and excessive punishments throughout the criminal justice system.

The New Corporate Facts of Life

An edited version of the text *Criminal Prosecution and Capital Punishment of Animals*—omitting much of the legal analysis and concentrating on an extraordinary range of trials To try an animal in a court of law for "crimes" and then sentence it to imprisonment or death seems barbaric, but for hundreds of years until the mid-19th century this practice was commonplace in Europe, and became the subject of a book called *Criminal Prosecution and Capital Punishment of Animals*. They include: an eight-month trial of a flock of weevils, for damaging vines—although the insects were found guilty, the sentence is unknown because the foot of the relevant parchment was eaten by insects. A pig tried found guilty of strangling and killing a baby in its cradle—the sentence was death and the pig was hanged. A group of rats who were summoned to court for eating the local barley, but failed to turn up—their defense counsel successfully argued that they had probably not received the summons and should be let off. There were even trials of inanimate objects, such as a Russian bell put on trial for abetting insurrection. It was found guilty and exiled to Siberia.

The Uses of Greek and Latin

In this book a number of Professor Minna Skafté Jensens articles on Danish Neo-Latin poetry have been collected. The rich Danish Renaissance literature in Latin has since the 1980s been the subject of increasing attention. In her pioneering studies, written between 1984 and 2001, Minna Skafté Jensen presents some of the central authors, such as Hans Jrgensen Sadolin, Tycho Brahe, and Zacharias Lund. The articles offer sensitive readings with an eye to intertextual allusions as well as to the sociological context. The articles which were originally published in Danish appear here for the first time in English.
