The Empath. The word has found its way into our consciousness accompanied by ideas of healing, sharing emotion and pain. Empaths are sensitive, caring, responsive people who have at the core of their nature an innate ability to receive energy, information and awareness from others with a depth and intensity that is beyond our customary understanding of empathy. Yet, this very receptivity and permeability brings its own challenges. It is vital for empaths to recognize themselves as such and to consciously explore, understand and address this energetic flow in their life. Self-inquiry is the essential tool to understanding all that motivates and colors your experience of the world. The book explores in depth this receptivity, as well as tools, concepts and approaches to support understanding and how to flourish with this heightened sensitivity. This book is a shared journey, edited from years of workshops and sessions with Elisabeth Fitzhugh and the Orion group.

The solution is shown on page 239. Rest of the book is a step-by-step logical progression to the solution. Why? Last century has seen many crisis unfold, but the learning from them had not been applied to make our system, safer and secured. According to the author, the prevailing Financial Crisis resulted from a poor quality of information, running the global financial system. The author uses the 'information asymmetry' and 'information lifecycle' to put forth his argument. As this book extracts learning from this crisis, it explains how financial sector and other businesses can apply the concept of 'High Quality of Information' to run a 'crisis-proof- business. In this book, the author constructs the global financial

architecture, that can resist crises in future. So, are we more wiser, living through the current crisis? What can the non-financial sector learn from this crisis? Make an assessment for yourself, using the C(X)O checklist at the end of the book.

Broken Capitalism

Businesses and managers everywhere are finding out that using the classical investment analysis methods is not enough to cover their need for smart decision-support for high risk, hard to estimate investments under vague information, such as investments into R&D, IPR, and any other strategic projects and assets. All methods presented are easily implementable with the most commonly used spread-sheet software. The pay-off method is a clear continuation to where the "old" investment analysis methods usually leave us off and gives you a chance to better plan and to understand your investments.
