This software is an integration of tools and simulators designed to help the user solve the most common feedforward predistorted amplifier design equations, including calculating gain and loop balance, optimum coupling ratios, and more. It includes the tools needed everyday, such as a microstrip calculator and parallel coupler designer, to relieve the user of lengthy calculations and help predict the performance of a complex amplifier before all the blocks are together. PACAD also features a nonlinearity simulator that simulates the intermodulation characteristics of an amplifier given the amplifier's compression gain and phase curves. This tool helps calculate the required characteristics of an optimum predistortion block, and simulates the combination of predistortion and

amplifier in terms of intermodulation products - taking the guesswork out of predistortion block design. There is an accompanying user's manual in this package.

This two-volume book focuses on both theory and applications in the broad areas of communication technology, computer science and information security. It brings together contributions from scientists, professors, scholars and students, and presents essential information on computing, networking, and informatics. It also discusses the practical challenges encountered and the solutions used to overcome them, the goal being to promote the “translation” of basic research into applied research, and of applied research into practice. The works presented here will also demonstrate the importance of basic scientific research in a range of fields.

Tonmeister Technology

Paul McGowan tells all (and then some) in this riotous tale of misbegotten success that's 99% true in all the best ways. From his not-so-innocent youth growing up in the shadow of Disneyland and summer evenings in the innocent 1950s, to his dope-smoking, snake-eating, draft-dodging, loony-bin misadventure through Europe, to his struggles to build a thriving enterprise from a stack of dusty albums-see how the CEO of a worldwide company took fifty years to become an overnight success. Unlike Paul, you may never get picked up by the Secret Service or carry the shame of bankruptcy, but you just might see yourself in his repeated failures or in his refusal to let life keep him down. You'll laugh and you'll cry as Paul describes the struggle of finding his place in a community you never knew existed. Through it all, you'll discover what Paul did: life's detours offer the best opportunities to find your way.
