The United Nations Arms Trade Treaty became binding international law in late 2014, and although the text of the treaty is a relatively concise framework for assessing whether to authorize or deny proposed conventional weapons transfers by States Parties, there exists controversy as to the meaning of certain key provisions. Furthermore, the treaty requires a national regulatory body to authorize proposed transfers of conventional weapons covered by the treaty, but does not detail how such a body should be established and how it should effectively function. The Arms Trade Treaty: A Commentary explains in detail each of the treaty provisions, the parameters for prohibitions or the denial of transfers, international cooperation and assistance, and implementation obligations and mechanisms. As states ratify and implement the Treaty over the next few years, the commentary provides invaluable guidance to government officials, commentators, and scholars on the meaning of its contentious provisions. This volume describes in detail which weapons are covered by the treaty and explains the different forms of transfer that the Arms Trade Treaty regulates. It covers international human rights, trade,

disarmament, humanitarian law, criminal law, and state-to-state use of force, as well as the application of the treaty to non-state actors.

Universal service is a focal point of telecommunications policy in the 1990s, not only in the United States, but in every other country that has begun to liberalize or deregulate its telecommunications industry. The new policy dialogue revolves around four questions. First, how much do the universal service obligations of incumbent telephone companies cost? Second, how can those costs be financed in a competitive environment? Third, what kind of technical and pricing arrangements should be made to interconnect incumbent telephone companies with the new,

competing networks? Finally, should the service bundle designated as "universal service" be redefined to take into account new technologies, and if so, how? In the United States, debate over those issues reached a milestone when the U.S. Congress passed the Telecommunications Act of 1996. The new law is the first comprehensive revision of the Communications Act of 1934 and culminates twenty years of legislative struggle over how to adapt federal law to the new realities of telecommunications. In effect, the new law codifies the perceived wisdom about interconnection, competition, and universal service in telecommunications. Because one of the chief purposes of Milton Mueller's analysis is to mount a historically grounded challenge to that orthodoxy, the new law provides the perfect foil for a critique that links the historical and contemporary policy debates over universal service.
