It used to take years or even decades for disruptive innovations to dethrone dominant products and services. But now any business can be devastated virtually overnight by something better and cheaper. How can executives protect themselves and harness the power of Big Bang Disruption? Just a few years ago, drivers happily spent more than \$200 for a GPS unit. But as smartphones exploded in popularity, free navigation apps exceeded the performance of stand-alone devices. Eighteen months after the debut of the navigation apps, leading GPS

manufacturers had lost 85 percent of their market value. Consumer electronics and computer makers have long struggled in a world of exponential technology improvements and short product life spans. But until recently, hotels, taxi services, doctors, and energy companies had little to fear from the information revolution. Those days are gone forever. Software-based products are replacing physical goods. And every service provider must compete with cloud-based tools that offer customers a better way to interact. Today, start-ups with minimal experience and no capital can unravel your strategy before you even begin to grasp what's happening. Never mind the "innovator's dilemma"—this is the innovator's disaster. And it's happening in nearly every industry. Worse, Big Bang Disruptors may not even see you as competition. They don't share your approach to customer service, and they're not sizing up your product line to offer better prices. You may simply be collateral damage in their efforts to win completely different markets. The good news is that any business can master the strategy of the start-ups. Larry Downes and Paul Nunes analyze the origins, economics, and anatomy of Big Bang Disruption. They identify four key stages of the new innovation life cycle, helping you spot potential disruptors in time. And they offer twelve rules for defending your markets, launching disruptors of your own, and getting out while there's still time. Based on extensive research by the Accenture Institute for High Performance and in-depth interviews with entrepreneurs, investors, and executives from more than thirty industries, Big Bang Disruption will arm you with strategies and insights to thrive in this brave new world.

Ahmad ibn Tulun (835-84), the son of a Turkic slave in the Abbasid court of Baghdad, became the founder of the first independent state in Egypt since antiquity, and builder of Egypt's short-lived third capital of the Islamic era, al-Qata'i' and its great congregational mosque. After recounting the story of Ibn Tulun and his successors, architectural historian Tarek Swelim presents a topographic survey of al-Qata'i', a city lost since its complete destruction in 905. He then provides a detailed architectural analysis of the Mosque of Ibn Tulun, which was spared the destruction and is now the oldest surviving mosque in Egypt and Africa, from the time of its completion until today. Rare archival illustrations and early photographs document the changing appearance and uses of the mosque in modern times, while extraordinary 3D computer renderings take us back in time to recreate its architectural development through its early centuries. Plans, drawings, and maps complement the history, while striking modern color photographs showcase the elegant simplicity of the building's architecture and decoration. This definitive and generously illustrated book will appeal to scholars and students of Islamic art history, as well as to anyone interested in or inspired by the beauty of early mosque architecture.

Demystifying Legal Reasoning defends the proposition that there are no special forms of reasoning peculiar to law. Legal decision makers engage in the same modes of reasoning that all actors use in deciding what to do: open-ended moral reasoning, empirical reasoning, and deduction from authoritative rules. This book addresses common law reasoning when prior judicial decisions determine the law, and interpretation of texts. In both areas, the popular view that legal decision makers practice special forms of reasoning is false.

## **The Book of Classical Music Lists**

Since its publication in 1990, the first edition of *Music, Sound, and Technology* has enjoyed wide success and has become a popular text in musical acoustical studies at the university level. In preparing the new edition we have included recent developments in all aspects of music and sound technology, and we have added data on acoustical characteristics of musical instruments. The first edition has been cited for the scope and clarity of its graphics; we have emphasized this to an even greater degree in the second edition. /ME xi Preface to the First Edition This book is about music, the instruments and players who produce it, and the technologies that support it. Although much modern music is produced by electronic means, its underlying basis is still traditional acoustical sound production, and that broad topic provides the basis for this book. There are many fine books available that treat musical acoustics largely from the physical point of view. The approach taken here is to present only the fundamentals of musical physics, while giving special emphasis to the relation between instrument and player and stressing the characteristics of instruments that are of special concern to engineers and technicians involved in the fields of recording, sound reinforcement, and broadcasting. In order to understand musical instruments in their normal performance environments.

## The Definition of Morality

Scherzo "How will gravity array itself, if wit is already cloaked so darkly?", asked Robert Schumann in his review of Chopin's Scherzo in B minor, Op. 20. His astonishment is easily understood, since the name "scherzo" (It.) literally means "joke", whereas Chopin's scherzos are almost never humorous or light-hearted. Quite the contrary: the four expansive one-movement works to which Chopin gave the title scherzo are marked with a drama and form which were unprecedented in the genre. They are given here in chronological order: Scherzo in B minor, Op. 20, published in 1835 (date of composition difficult to establish precisely) Scherzo in B flat minor, Op. 31, completed 1837 and published the same year Scherzo in C sharp minor, Op. 39, composed 1839, published the following year Scherzo in E major, Op. 54, composed 1842-1843, published 1843 The scherzo appeared on the threshold of the Baroque era (e.g. Monteverdi's Scherzi musicali, 1607), initially as a vocal-instrumental genre of a cheerful character. Chopin, however, referred to the much later, classical, instrumental scherzo of tripartite, A B(trio) A, construction, in a rapid tempo and triple time, usually forming part of a larger work (sonata, symphony). In keeping with their name, most scherzos before Chopin were marked by brightness and levity; only with Beethoven did the scherzo sometimes gain a different expression: full of anxiety and unbridled energy, almost demonic.
