A modern composer linked to the great Russian tradition of Rimsky-Korsakov and Mussorgsky, Alexander Tcherepnin produced a substantial body of work-both compositions and writings-that is of interest to music scholars as well as performers. Although his works are better known and more frequently performed in Europe, Tcherepnin made a unique contribution to the U.S. musical scene in the 1950s and 1960s as a teacher of composition at De

Paul University in Chicago. This volume provides detailed information on his life and accomplishments, together with a catalogue of his works and performances and a complete bibliography. The first section offers an account of the composer's life and musical education in Russia and Paris and his subsequent career in the United States. It concludes with a critical analysis of his musical style. The catalogue is followed by separate alphabetical, chronological, and genre listings of the composer's works. The final sections are devoted to a discography of commercially available sound recordings and an annotated bibliography of writing by and about Tcherepnin. A series of appendixes contains valuable additional information on Tcherepnin's life and accomplishments, as well as data relating to the musical careers of his father, his two sons, and several of his composition students who have become recognized composers in their own right. This work, which incorporates the first detailed English-language biography of Alexander Tcherepnin, will be a valuable resource for scholars, music educators, and musicians with an interest in Russian music of the late nineteenth and early twentieth centuries.

squirrels came marauding through the area, denuding the trees and crops. Of course, the farmers fought back with guns; the kids with clubs. This happened just about the time of the Irish canal worker infighting; those boys attacked one another with everything they had. Oh, and there are the unexplained monster sightings and things of that nature. But really, it's not all bizarre. After all, Wabash was the first electrically lighted city, and there are scores of heroes and important businesses. There's just so much to hear about. Come along with authors Ron Woodward and Gladys Harvey as they share the strange and important history of this old Indiana county.

Ever since Max Friz first mounted his innovative M2B32 opposed-twin engine in a motorcycle frame in 1923, the history of BMW motorcycles has been defined by a constant and relentless quest for perfection. In the 95 years that have followed, the company has created the most innovative and technologically advanced motorcycles produced anywhere on earth. BMW has earned a reputation for not doing things the way everyone else does, but its motorcycles aren't different simply for the sake of being different. Each distinctive feature represents a brilliant and elegant solution to a real problem, leading BMW to be the first company to introduce many of the features that were later adopted by other manufacturers. But there's more to a BMW motorcycle than innovation and technology—there's also art. And as beautiful as the bikes are in their totality, they may be even more so when broken down into their individual details. This book captures the elegance of these amazing machines, both in their details and in the sum of their parts, through the masterful photography of Henry von Wartenberg and writing of author Peter Gantriis. *The Art of BMW: Ninety Years of Motorcycling Excellence* features the Peter Nettesheim collection, one of the world's premier collections of BMW motorcycles.
