Technology for a Quieter America

Cost Accounting

Exposure to noise at home, at work, while traveling, and during leisure activities is a fact of life for all Americans. At times noise can be loud enough to damage hearing, and at lower levels it can disrupt normal living, affect sleep patterns, affect our ability to concentrate at work, interfere with outdoor recreational activities, and, in some cases, interfere with communications and even cause accidents. Clearly, exposure to excessive noise can affect our quality of life. As the population of the United States and, indeed, the world increases and developing countries become more industrialized, problems of noise are likely to become more pervasive and lower the quality of life for everyone. Efforts to manage

noise exposures, to design quieter buildings, products, equipment, and transportation vehicles, and to provide a regulatory environment that facilitates adequate, cost-effective, sustainable noise controls require our immediate attention. Technology for a Quieter America looks at the most commonly identified sources of noise, how they are characterized, and efforts that have been made to reduce noise emissions and experiences. The book also reviews the standards and regulations that govern noise levels and the federal, state, and local agencies that regulate noise for the benefit, safety, and wellness of society at large. In addition, it presents the cost-benefit trade-offs between efforts to mitigate noise and the improvements they achieve, information sources available to the public on the dimensions of noise problems and their mitigation, and the need to educate professionals who can deal with these issues. Noise emissions are an issue in industry, in communities, in buildings, and during leisure activities. As such, Technology for a Quieter America will appeal to a wide range of stakeholders: the engineering community; the public; government at the federal, state, and local levels; private industry; labor unions; and nonprofit organizations. Implementation of the recommendations in Technology for a Quieter America will result in reduction of the noise levels to which Americans are exposed and will improve the ability of American industry to compete in world markets paying increasing attention to the noise emissions of products.

U.S. Industrial Outlook

Aircraft

Ready for Takeoff

and other foreign aerospace firms are dependent on supplies from China, and the implications of all of these issues for U.S. security interests. The study should be of interest to business analysts, policymakers, lawmakers, and anyone who wishes to learn about China's market for commercial aviation, the capabilities of China's aerospace manufacturing industry, the role foreign aerospace firms are playing in the development of China's aerospace capabilities, and security implications for the United States. This research was sponsored by the U.S-China Economic and Security Review Commission, which was established by Congress in 2000 to monitor and report on the economic and national security dimensions of U.S. trade and economic ties with the People's Republic of China. This research was conducted within the International Security and Defense Policy Center of the RAND Corporation's National Security Research Division (NSRD).

Aircraft Design Projects

Because of the important national defense contribution of large, non-fighter aircraft, rapidly increasing fuel costs and increasing dependence on

imported oil have triggered significant interest in increased aircraft engine efficiency by the U.S. Air Force. To help address this need, the Air Force asked the National Research Council (NRC) to examine and assess technical options for improving engine efficiency of all large non-fighter aircraft under Air Force command. This report presents a review of current Air Force fuel consumption patterns; an analysis of previous programs designed to replace aircraft engines; an examination of proposed engine modifications; an assessment of the potential impact of alternative fuels and engine science and technology programs, and an analysis of costs and funding requirements.

A comprehensive index to company and industry information in business journals.

Perfect Media

Mergent Corporate News Reports Monthly

Covering New York, American & regional stock exchanges & international companies.

Marine Corps procurement programs

A reference work describing every major aeroplane engine manufacturer throughout the world, together with its products, from the pioneering days to the recent engines. Each aero engine is within its technological and historical context with power plants of all nationalities illustrated. The human element of the story is also included with the personal struggles that resulted in such notable engines as the Rolls-Royce Merlin and the Pratt & Whitney P6 being related.

Improving the Efficiency of Engines for Large Nonfighter Aircraft

Examines the 1984 "war" that pitted Pratt and Whitney against GE in head-to-head competition for multi billion dollar defense contracts to provide high performance engines for front line fighter aircraft. The circumstances surrounding the lengthy battle led to the Air Force decision to split future engine sales between the two. Attempts to cut through emotional opinions of the "combatants," to report reality, and to identify lessons learned. Helps the reader to understand the government-to-contractor personality issues; to understand management styles, business expectations and communication skills of key participants.
