Financial Peace Revisited

A user-friendly presentation of the essential concepts and tools for calculating real costs and profits in personal finance. Understanding the Mathematics of Personal Finance explains how mathematics, a simple calculator, and basic computer spreadsheets can be used to break down and understand even the most complex loan structures. In an easy-to-follow style, the book clearly explains the workings of basic financial calculations, captures the concepts behind loans and interest in a step-by-step manner, and details how these steps can be implemented for practical purposes. Rather than simply providing investment and borrowing strategies, the author successfully equips readers with the skills needed to make accurate and effective decisions in all aspects of personal finance ventures, including mortgages, annuities, life insurance, and credit card debt. The book begins with a primer on mathematics, covering the basics of arithmetic operations and notations, and proceeds to explore the concepts of interest, simple interest, and compound interest. Subsequent chapters illustrate the application of these concepts to common types of personal finance exchanges, including: Loan amortization and savings
Mortgages, reverse mortgages, and viatical settlements
Prepayment penalties
Credit cards
The book provides readers with the tools needed to calculate real costs and profits using various financial instruments. Mathematically inclined readers will enjoy the inclusion of mathematical derivations, but these sections are visually distinct from the text and can be skipped without the loss of content or complete understanding of the material. In addition, references to online calculators and instructions for building the calculations involved in a spreadsheet are provided. Furthermore, a related Web site features

additional problem sets, the spreadsheet calculators that are referenced and used throughout the book, and links to various other financial calculators. Understanding the Mathematics of Personal Finance is an excellent book for finance courses at the undergraduate level. It is also an essential reference for individuals who are interested in learning how to make effective financial decisions in their everyday lives.

'Keeping a text in this area up to date was always going to be a critical and monumental challenge. The editors have done a timely and impressive job.' - Professor Peter Howells, Centre for Global Finance, UWE Bristol 'Personal Finance addresses a particular gap, and the overview is impressive.' - Steve McKay, Bristol University (Personal Finance Research Centre) 'What distinguishes this book is that it focuses not only on 'what you need to know' about personal finance, but also on 'what you might be interested in knowing' about the socio-economic context in which financial decisions are made - it makes the text more useful for an academic course and certainly makes for interesting reading.' - Jane King, Oxford Brookes University 'Personal Finance presents the subject of financial planning in an intellectually stimulating way which links theory to practice and is comprehensible to both the student and the layperson.' - James Mallon, Napier University

In Personal Benchmark: Integrating Behavioral Finance and Investment Management, Chuck Widger and Dr. Daniel Crosby outline the ways in which a program of embedded behavioral finance, fueled by what matters most to you, can be your protection against irrational financial behavior. Along the way, you'll learn how to improve your investment experience, increase returns formerly sacrificed to misbehavior, and worry less about "The Economy" as you become increasingly focused on "My Economy." Welcome to a new way of investing, a new paradigm for conceptualizing wealth, and a system of turning emotion from your portfolio's worst enemy into its best friend! In this new model, risk is simply the likelihood that we will underperform our dreams. Irrationality is acting in ways that thwart our ability to reach those dreams. And the optimal portfolio is not the one that generates the highest return in abstraction, it is the one that helps us meet our goals without killing our nerves before we get there. This book gives advisors the tools needed to effectively communicate the design and execution of the Personal Benchmark solution.

The treatment of vertical intra-brand restraints is one of the most controversial issues of contemporary competition law and policy, and there are substantial differences between the world's two leading regimes in this regard. In the US, resale price fixing merits an effects-analysis, while in the EU it is prohibited outright. Likewise, territorial protection is treated laxly in the US, while in the EU absolute territorial protection - due to the single market imperative - is chased with fire and sword.

Every family should have financial goals for the future. Being unprepared can lead to monetary chaos. Financial Management of Your Future deals with strategies for accomplishing financial goals. What investment returns are necessary to achieve explicit family goals? How are returns logically related to risks for investment opportunities that are considered? Can different families have different tolerances for experiencing investment risk? Why is asset allocation the key investment decision for most families? What are the characteristics and valuations of bonds, stocks, mutual funds, real estate and international securities that a family might consider? How should a family construct, monitor, and revise a portfolio of investments over time? How should careful estate planning be done by a family in order to delay or avoid taxes in passing on property to their children, grandchildren, and favorite charities? And how can some of the concepts and techniques from "modern portfolio theory" be helpful to a family as it attempts to answer these questions? This book deals with financial strategies for three adult age categories: (1) Families of ages twenty to forty in the earlier years of active employment, child raising, and the beginning of saving for retirement; (2) Families of ages forty to sixty in their years of maximum income, high educational expenses for their children, and more serious thinking about forthcoming retirement; and (3) Families of ages sixty to eighty having retired or approaching full retirement.
