The essays collected in this volume offer fresh readings of Dickens's travelogues and novels, often pointing to the many-sidedness of his personality. The 'uncommercial traveller' emerges as an ecumenical John Bull, chary of the alien but greedy of novelty, a man whose incursions on well-trodden or unfamiliar ground are always journeys into the uncanny. Besides dealing with the geography of the novelist's imagination, the book explores numerous 'new worlds' such as the

inspiring world of Victorian science and Dickens's responses to it or the world of modern literary theory that shapes our own responses to his work.

Vinuta slowly loses her peace of mind and health. Then Gouramma decides to visit her US-based son and daughter-in-law. Once there, she sees how liberating life can be, away from the strict norms that govern Indian middle-class life. Stone Barrington only wants a winter getaway from the chill of New York in the beautiful, tropical Caribbean paradise of St. Mark's. But what the lawyer and ex-cop gets instead is the chance to defend Allison Manning. The beautiful young woman stands accused of killing her rich husband on board their luxurious yacht and then burying him at sea. Stone isn't exactly conversant with the island country's law, but this much is clear to him: Allison is being railroaded by the perverse sense of justice of a prosecutor who will do anything to stay in office. Donning the robe and wig of a British barrister, Stone does everything he can to save Allison—from publicizing the case all over the American press to conducting

the kind of smart, tough investigation that money can't buy. Just when he has the jury in the palm of his hands, a shocking reversal of fortune changes everything. And what was once a sure thing begins to look a lot like a death sentence.

The use of the computer in translating natural languages ranges from that of a translator's aid for word processing and dictionary lookup to that of a full-fledged translator on its own. However the obstacles to translating by means of the

computer are primarily linguistic. To overcome them it is necessary to resolve the ambiguities that pervade a natural language when words and sentences are viewed in isolation. The problem then is to formalize, in the computer, these aspects of natural language understanding. The authors show how, from a linguistic point of view, one may form some idea of what goes on inside a system's black box, given only the input (original text) and the raw output (translated text before post-editing). Many examples of English/French translation are used to illustrate the principles involved.
