Communication skills are an essential part of all university degree courses, and chemistry is no exception. The aspects of communication skills identified in this book are: * Information retrieval * written delivery * visual delivery * oral delivery * team work and * problem solving Material includes background information for tutors and a detailed tutor's guide, as well as suggestions for sources of extra material or alternative ways of running the exercise. Trialled at several institutions, this book can be used as a modular text, or as a set of "stand alone" exercises. It is aimed at students in the penultimate year of a chemistry degree.

Polish Journal of Chemistry

A decade has elapsed since the discovery of C₆₀ in molecular beams, and five years since the first synthesis of solid C₆₀. At the time, the opening of a new era for chemistry was foreseen and high expectations were shared by physicists and material scientists. Where are we now? Where are we aiming? What can we expect from now on? The answer will be found in this volume, written by the protagonists of the fullerene adventure. There is a whole new generation of materials now, in the form of molecules, solids, nanostructures, either directly derived from Bucky or inspired by it. They continue to create new challenges to our fundamental understanding and seem to be ready for important, long-lasting applications. Audience: The book is mainly directed to specialized scientists - physicists, chemists, material scientists and biochemists - who will find it a source of learning and inspiration. Younger researchers, too, will find it fascinating, since it allows them to learn about and quickly acquire a critical view of an interdisciplinary, frontier subject.
