Rethinking Teacher Supervision and Evaluation

Houghton Mifflin Mathematics, California Edition

The LIFEPAC Language Arts complete set contains all 10 student workbooks for a full year of study plus the comprehensive Teacher's Guide.

Go Math! Grade 4

From two math coaches who really know how Have you ever wished there were a single resource to help you tackle your most persistent teaching issues once and for all? To engage students in more meaningful ways? To provide the tools you need to increase students’ understanding of key mathematical concepts? All at the same time! Math coaches Thomasenia Lott Adams and Joanne LaFramenta have just written it. With the help of this book, you’ll be armed with the know-how to employ strategies to achieve the CCSS, especially the Mathematical Practices make purposeful teaching decisions facilitate differentiated instruction teach and learn with manipulatives use technology appropriately

Go Math! Grade 4

Principles to Actions

Contains a complete sixth grade mathematics curriculum with connections to other subject areas.

Understanding by Design

Make your first year—and every year—a success with this essential guide! As a

new teacher, you can be completely overwhelmed-feeling lost and not knowing where to start when you receive the keys for the first time. The Organized Teacher's Guide to Your First Year of Teaching, Second Edition will be your guide during these first few days and weeks and put you on the road to success. Written by an award-winning author team, this practical guide will help you successfully navigate your new role. You'll find a series of checklists, charts, and diagrams and guidelines you can use to organize your lessons, schedule, and classroom. There's a ton of reproducible content in the book and an additional 50 pages of content can accessed online. This essential resource will help you thrive in your first year and beyond. The Organized Teacher's Guide to Your First Year of Teaching, Second Edition features: •All-in-one resource and checklist for teachers of grades K-6•Expert advice on organizing your classroom•Suggestions for planning lessons and creating schedules•Reproducible content (in the book and available online) ready for you to use•Charts, diagrams and checklists for organizing a new classroom•Tips on increasing productivity, and more

Go Math!, Grade 3

Cultivating a Math Coaching Practice

Go Math!

Mathematical Mindsets

In this important book, education expert Kim Marshall shows how to break away from the typical and often ineffective evaluation approaches in which principals use infrequent classroom visits or rely on standardized test scores to assess a teacher's performance. Marshall proposes a broader framework for supervision and evaluation that enlists teachers in improving the performance of all students. Emphasizing trust-building and teamwork, Marshall's innovative, four-part framework shifts the focus from periodically evaluating teaching to continuously analyzing learning. This book offers school principals a guide for implementing Marshall's framework and shows how to make frequent, informal classroom visits followed by candid feedback to each teacher; work with teacher teams to plan thoughtful curriculum units rather than focusing on individual lessons; get teachers as teams involved in low-stakes analysis of interim assessment results to fine-tune their teaching and help struggling students; and use compact rubrics for summative teacher evaluation. This vital resource also includes extensive tools and advice for managing time as well as ideas for using supervision and evaluation practices to foster teacher professional development.

The Relatives Came

Banish math anxiety and give students of all ages a clear roadmap to success Mathematical Mindsets provides practical strategies and activities to help teachers and parents show all children, even those who are convinced that they are bad at

math, that they can enjoy and succeed in math. Jo Boaler—Stanford researcher, professor of math education, and expert on math learning—has studied why students don't like math and often fail in math classes. She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students. There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home. This book bridges that gap by turning research findings into practical activities and advice. Boaler translates Carol Dweck's concept of 'mindset' into math teaching and parenting strategies, showing how students can go from self-doubt to strong self-confidence, which is so important to math learning. Boaler reveals the steps that must be taken by schools and parents to improve math education for all. Mathematical Mindsets: Explains how the brain processes mathematics learning Reveals how to turn mistakes and struggles into valuable learning experiences Provides examples of rich mathematical activities to replace rote learning Explains ways to give students a positive math mindset Gives examples of how assessment and grading policies need to change to support real understanding Scores of students hate and fear math, so they end up leaving school without an understanding of basic mathematical concepts. Their evasion and departure hinders math-related pathways and STEM career opportunities. Research has shown very clear methods to change this phenomena, but the information has been confined to research journals—until now. Mathematical Mindsets provides a proven, practical roadmap to mathematics success for any student at any age.

Math Workshop in Action

The relatives come to visit from Virginia and everyone has a wonderful time.

Geometry

This resource offers math activities, planning activities, and a facilitator's guide for developing mathematics leaders' coaching practice and knowledge of math teaching and learning.

Discrete Mathematics

This book showcases strategies which support teachers and principals as they implement high standards for students. At the same time, it demonstrates how to meet the needs of diverse learners.

Principles and Standards for School Mathematics

This heavily researched, detailed book will help first-year middle school teachers learn how to handle supplies, planning, parents, overcrowded classrooms, the requirements of the No Child Left Behind Act, piles of paperwork, money shortages due to budget cuts, negativity from pubescent students and other staff members, at-risk students, students who are capable but choose not to work, and special needs students. You will learn how to ask principals and administrators for help, memorize names quickly, create seating charts, write lesson plans, follow a daily

routine, help struggling readers, gain respect, find a mentor, develop and implement a grading system, discipline students who feel they are more mature than they are, create assessments, find free things for teachers online, and build your confidence. The most important thing of all, you will learn how to deal with the rapidly changing emotions and hormones of new teenagers and middle school age students.

Connected Mathematics

GO Math! offers an engaging and interactive approach to covering the Common Core State Standards. This Grade 6 student edition is organized into individual chapter booklets and comes with a student resource book.

How to Be Successful in Your First Year of Teaching Middle School

GO Math! combines fresh teaching approaches with never before seen components that offer everything needed to address the rigors of new standards and assessments. The new Standards Practice Book, packaged with the Student Edition, helps students achieve fluency, speed, and confidence with grade-level concepts. GO Math! is the first K-6 math program written to align with the Common Core. With GO Math! you will hit the ground running and have everything you need to teach the Common Core State Standards. GO Math! combines fresh teaching approaches with everything needed to address the rigors of the Common Core Standards. Using a unique write-in student text at every grade, students represent, solve, and explain -- all in one place. - Publisher.

Go Math! Grade 2

From Rigorous Standards to Student Achievement

“I don’t always know (students) by face; I know them by data,” an elementary curriculum specialist explains ruefully in this broad examination of how No Child Left Behind impacts schools and shapes teaching practice. Capturing the changes teachers are experiencing, especially in the areas of mathematics and reading, the authors compare and contrast three schools with diverse student populations, examining how they differ in school norms and structures, professional roles and responsibilities, curriculum, staff development, and teaching and learning. Including rich observational data and personal accounts from educators, this inside look at school reform: Analyzes the effects of policies from multiple levels, examining relationships among initiatives at the federal, state, district, and local school levels. Focuses on the impact that high-stakes testing policies have on reading and mathematics instruction in 4th and 5th grades Provides teacher and principal perspectives on factors that influence how practitioners make sense of, mediate, and construct school policy.

McGraw-Hill My Math

This text offers guidance to teachers, mathematics coaches, administrators, parents, and policymakers. This book: provides a research-based description of eight essential mathematics teaching practices ; describes the conditions, structures, and policies that must support the teaching practices ; builds on NCTM's Principles and Standards for School Mathematics and supports implementation of the Common Core State Standards for Mathematics to attain much higher levels of mathematics achievement for all students ; identifies obstacles, unproductive and productive beliefs, and key actions that must be understood, acknowledged, and addressed by all stakeholders ; encourages teachers of mathematics to engage students in mathematical thinking, reasoning, and sense making to significantly strengthen teaching and learning.

Core Focus on Shapes and Angles

This set provides the consumable Student Edition, Volume 1, which contains everything students need to build conceptual understanding, application, and procedural skill and fluency with math content organized to address CCSS. Students engage in learning with write-in text on vocabulary support and homework pages, and real-world problem-solving investigations.

Go Math! Standards Practice Book Level 5

Go Math! Grade 6

How People Learn

Go Math! Grade 2

Presents a multifaceted model of understanding, which is based on the premise that people can demonstrate understanding in a variety of ways.

McGraw-Hill My Math, Grade 3, Student Edition

McGraw-Hill My Math develops conceptual understanding, computational proficiency, and mathematical literacy. Students will learn, practice, and apply mathematics toward becoming college and career ready.

Go Math!

This easy-to-read summary is an excellent tool for introducing others to the messages contained in Principles and Standards.

Go Math! 2016, Grade 2

Go Math!, Grade 5

Find out how Math Workshops engage students and increase learning. This practical book from bestselling author Dr. Nicki Newton explains why Math Workshops are effective and gives you step-by-step instructions for implementing and managing your own workshop. You'll find out how to create a math-rich environment; use anchor charts effectively; manage the workshop; begin a workshop with activities; lead whole-group mini-lessons; make workstations

meaningful and engaging; create guided math groups; implement "the Share" effectively; and ensure balanced assessments. Each chapter offers a variety of charts and tools that you can use in the classroom immediately, as well as reflection questions and key points. The book also features a handy Quick-Start Guide to help you as you implement your own workshop.

Tennessee Math!

Curriculum and Teaching Dialogue is a peer-reviewed journal sponsored by the American Association for Teaching and Curriculum. The purpose of the journal is to promote the scholarly study of teaching and curriculum. The aim is to provide readers with knowledge and strategies of teaching and curriculum that can be used in educational settings. The journal is published annually in two volumes and includes traditional research papers, conceptual essays, as well as research outtakes and book reviews. Publication in CTD is always free to authors.

Go Math!

Math Know-How

First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
