### American History

Over 200 previously unpublished photographs document the building and development of the many check points, barbed wire barriers, and alarmed fences which formed the concrete wall around Berlin. This book tells dramatic tales of spectacular escapes and terrible deaths, and explains the history making events surrounding the building and fall of the Wall. Contemporary photographs are contrasted with photographs from the eighties to offer surprising insights into how the former death strip has changed since 1990. Relics of the wall in the current cityscape are prominently illustrated, including remnants of the Wall itself, expanded metal lattice fences, observation towers, barbed wire and concrete posts. Also included are statistics showing the numbers of refugees and victims of the Wall, a guide to the museums and memorials and a summary of the literature and cinema treatment of the Wall, along with a brief chronicle of its history.

updated throughout to deliver a comprehensive, timely introduction to biostatistics and epidemiology as applied to medicine, clinical practice, and research. Particular emphasis is on study design and interpretation of results of research. The book features “Presenting Problems” drawn from studies published in the medical literature, end-of-chapter exercises, and a reorganization of content to reflect the way investigators ask research questions. To facilitate learning, each chapter contain a set of key concepts underscoring the important ideas discussed. Features:

- Key components include a chapter on survey research and expanded discussion of logistic regression, the Cox model, and other multivariate statistical methods
- Extensive examples illustrate statistical methods and design issues
- Updated examples using R, an open source statistical software package
- Expanded coverage of data visualization, including content on visual perception and discussion of tools such as Tableau, Qlik and MS Power BI
- Sampling and power calculations imbedded with discussion of the statistical model

This book showcases the latest digital skin imaging, optical/laser systems and advanced immunologic therapies including topics ranging from the basic dermatologic sciences to advanced microscopic and laser optics. The addition of radiologic breakthroughs serves as comprehensive source for the dermatologic community, helping them access sonographic, CT, MRI and nuclear medicine procedures refined for dermatologic and subcutaneous pathologies. In addition, it assists radiologists determine the appropriate imaging technologies for specific clinical dermal disorders. A detailed and up-to-date overview of image-guided treatments is provided. The initial chapters on benign and inflammatory diseases are precursors to advanced chapters on hidradenitis suppurativa and pigmented lesion analysis. A dedicated chapter on melanoma skin cancer and malignant melanoma is followed by updated concepts of melanoma treatment, including genetic markers and PET/CT to monitor therapeutic success. Further chapters address such topics as dermal trauma from foreign bodies and burns, scar

imaging, fillers complications and podiatric imaging. Chapters on optical coherence tomography and reflectance confocal microscopy complete the coverage. All chapters were written by dermatologists trained in ultrasound diagnosis, interventional radiologists, dermatopathologists and specialists in advanced optical and microscopic dermatologic analysis, providing a reference guide to noninvasive diagnosis techniques and image guided minimally invasive treatment options. As such, Image Guided Dermatologic Treatments will be an invaluable asset for clinicians in medical and allied fields where dermatologic diagnosis using the least invasive option is required.

Part of the popular LPN Threads series, Introduction to Maternity & Pediatric Nursing provides a solid foundation in obstetrics and pediatric nursing. An easy-to-follow organization by developmental stages, discussion of disorders by body system from simple-to-complex and health-to-illness, and a focus on family health make it a complete guide to caring for maternity and pediatric patients. Written in a clear, concise style by Gloria Leifer, MA, RN, this edition reflects the current NCLEX® test plan with additional material on safety, health promotion, nutrition, and related psychosocial care. Cultural Considerations boxes and a Cultural Assessment Data Collection Tool help in developing individualized plans of care. Updated health promotion content includes Health Promotion boxes focusing on preventive strategies for achieving prenatal wellness, health during pregnancy, postnatal health, and pediatric illness prevention and wellness -- including the complete immunization schedules for all ages. Nursing Tips provide information applying to the clinical setting. Objectives are listed in each chapter opener. Key terms include phonetic pronunciations and text page references at the beginning of each chapter. Nursing Care Plans with critical thinking questions help you understand how a care plan is developed, how to evaluate care of a patient, and how to apply critical thinking skills. A companion Evolve website includes animations, videos, answers to review questions and answer guidelines for critical thinking questions, an English/Spanish audio glossary, critical thinking case studies, and additional review questions for the NCLEX examination.

An ideal text for radiation oncologists, hematologist-oncologists, and radiologists, Image-Guided Radiotherapy and Functional Imaging in Modern Lymphoma Management is the foremost source for information on the increasingly important subject of image guided radiation therapy (IGRT) and its crucial role in the clinical evolution of high-precision ionizing beam therapy. An understanding of IGRT allows clinicians to improve targeting accuracy and safely increase dosage

administration without increasing toxicity in normal, healthy tissue areas, resulting in better lymphoma patient outcomes.

PET imaging has become an essential part of radiation therapy for cancer patients. Leading off the issue are articles on clinical applications and technical aspects. Following those are reviews of the use of PET in the treatment for lung cancer, gynecologic malignancies, GI and pancreatic tumors, and brain tumors, lymphoma, and head and neck malignancies. The final article addresses advances in hybrid imaging in planning of radiation therapy.

Sponges (phylum Porifera) are known to be very rich sources for bioactive compounds, mainly secondary metabolites. Main efforts are devoted to cell- and mariculture of sponges to assure a sustainable exploitation of bioactive compounds from biological starting material. These activities are flanked by improved technologies to cultivate bacteria and fungi which are associated with the sponges. It is the hope that by elucidating the strategies of interaction between microorganisms and their host (sponge), by modern cell and molecular biological methods, a more comprehensive cultivation of the symbiotic organisms will be possible. The next step in the transfer of knowledge to biotechnological applications is the isolation, characterization and structural determination of the bioactive compounds by sophisticated chemical approaches.
