The Last Great Ape

Bachelor Thesis from the year 2003 in the subject Business economics - Investment and Finance, grade: 1.0 (A), Edinburgh Napier University (Business

School), 200 entries in the bibliography, language: English, abstract: For several decades academics have been looking for an efficient performance measure, which not only reflects the effectiveness and efficiency of the firm, but also aligns manager s and shareholder s interests. Even though many studies question the merit of a single measure for overall firm performance, Stern and Stewart claim to have solved the puzzle with a method labeled Economic Value Added (EVA). This paper examines two aspects: First, EVA s predicting power regarding stock returns and second, its impact on management behavior as an element of executive compensation. At first glance, Stern and Stewart seem to be right. During the early 1990s their approach gained tremendous popularity, reflected by dozens of anecdotal success stories. Though EVA s demand of integrating a total capital charge is appealing, the concept is by no means new. The framework of residual income (economic profit), which has been around for decades, also requires a charge for equity capital. Further, some scholars criticize the use of accounting adjustments in order to calculate EVA and its ability to capture performance at the divisional level. So far there is no independent empirical evidence that EVA is superior to accounting measures in predicting stock returns. Some studies even question EVA s incremental value regarding executive compensation by stating that economic profit is doing as good a job. Consequently, it is tempting to doubt that Economic Value Added indeed adds any value.

Wayfinding, Consumption, and Air Terminal Design

If the US continues with its current policies, the next decades will be marked by war, economic collapse, and environmental catastrophe. Resource depletion and population pressures are about to catch up with us, and no one is prepared. The political elites, especially in the US, are incapable of dealing with the situation and have in mind a punishing game of “Last One Standing.” The alternative is “Powerdown,” a strategy that will require tremendous effort and economic sacrifice in order to reduce per-capita resource usage in wealthy countries, develop alternative energy sources, distribute resources more equitably, and reduce the human population humanely but systematically over time. While civil society organizations push for a mild version of this, the vast majority of the world’s people are in the dark, not understanding the challenges ahead, nor the options realistically available. Powerdown speaks frankly to these dilemmas. Avoiding cynicism and despair, it begins with an overview of the likely impacts of oil and natural gas depletion and then outlines four options for industrial societies during the next decades: Last One Standing: the path of competition for remaining resources; Powerdown: the path of cooperation, conservation and sharing; Waiting for a Magic Elixir: wishful thinking, false hopes, and denial; Building Lifeboats: the path of community solidarity and preservation. Finally, the book explores how three important groups within global society—the power elites, the opposition to the elites (the antiwar and antiglobalization movements, et al: the “Other

Superpower”), and ordinary people—are likely to respond to these four options. Timely, accessible and eloquent, *Powerdown* is crucial reading for our times. Richard Heinberg is an award-winning author of five previous books, including *The Party’s Over: Oil, War and the Fate of Industrial Societies*. A member of the Core Faculty of New College of California, he lives in Santa Rosa, California.

The many facets of grammatical gender remain one of the most fruitful areas of

linguistic research, and pose fascinating questions about the origins and development of complexity in language. The present work is a two-volume collection of 13 chapters on the topic of grammatical gender seen through the prism of linguistic complexity. The contributions discuss what counts as complex and/or simple in grammatical gender systems, whether the distribution of gender systems across the world's languages relates to the language ecology and social history of speech communities. Contributors demonstrate how the complexity of gender systems can be studied synchronically, both in individual languages and over large cross-linguistic samples, and diachronically, by exploring how gender systems change over time. In addition to three chapters on the theoretical foundations of gender complexity, volume one contains six chapters on grammatical gender and complexity in individual languages and language families of Africa, New Guinea, and South Asia. This volume is complemented by volume two, which consists of three chapters providing diachronic and typological case studies, followed by a final chapter discussing old and new theoretical and empirical challenges in the study of the dynamics of gender complexity.

This book is about using the Internet as a teaching tool. It starts with the psychology of the learner and looks at how best to fit technology to the student, rather than the other way around. The authors include leading authorities in many areas of psychology, and the book takes a broad look at learners as people. Thus, it includes a wide range of materials from how the eye "reads" moving graphs on a Web page to how people who have never met face-to-face can interact on the Internet and create "communities" of learners. The book considers many Internet technologies, but focuses on the World Wide Web and new "hybrid" technologies that integrate the Web with other communications technologies. This book is essential to researchers in psychology and education who are interested in learning. It is also used in college and graduate courses in departments of psychology and educational psychology. Teachers and trainers at any level who are using technology in their teaching (or thinking about it) find this book very useful. Key Features * Distinguished authors with considerable expertise in their fields * Broad "intra-disciplinary" perspective on learning and teaching on the Web * Focus on the Web and emerging Web-based technologies * Special attention to conducting educational research on-line * Emphasis on the Social and Psychological Context * Analyses of effective Web-based learning resources * Firmly grounded in contemporary psychological research and theory

Behavioural studies have shown that while humans may be the best decision makers on the planet, we are not quite as good as we think we are. We are regularly subject to biases, inconsistencies and irrationalities in our decision making. *Decision Behaviour, Analysis and Support* explores perspectives from many different disciplines to show how we can help decision makers to deliberate and make better decisions. It considers both the use of computers and databases to support decisions as well as human aids to building analyses and some fast and frugal tricks to aid more consistent decision making. In its exploration of decision support it draws together results and observations from decision theory, behavioural and psychological studies, artificial intelligence and information systems, philosophy, operational research and organisational studies. This provides a valuable resource for managers with decision-making responsibilities and students from a range of disciplines, including management, engineering and information systems.

This book investigates how international air terminals organize passenger movement and generate spending. It offers a new understanding of how their architecture and artworks operate visually to guide people through the space and affect their behaviour. Menno Hubregtse's research draws upon numerous airport visits and interviews with architects and planners, as well as documents and

articles that address these terminals' development, construction, and renovations. The book establishes the main concerns of architects with respect to wayfinding strategies and analyzes how air terminal architecture, artworks, and interior design contribute to the airport's operations. The book will be of interest to art historians, architectural historians, practising architects, urban planners, airport specialists, and geographers.

Psychology of Learning for Instruction

This book gathers selected papers from the 28th Eurasia Business and Economics Society (EBES) Conference, held in Coventry, United Kingdom. While the theoretical and empirical papers presented cover diverse areas of economics and finance in various geographic regions, the main focus is on the latest research concerning the economics of innovation, finance and macroeconomics. The book also includes regional studies.

Anyone who has experienced turbulence in flight knows that it is usually not pleasant, and may wonder why this is so difficult to avoid. The book includes papers by various aviation turbulence researchers and provides background into

the nature and causes of atmospheric turbulence that affect aircraft motion, and contains surveys of the latest techniques for remote and in situ sensing and forecasting of the turbulence phenomenon. It provides updates on the state-of-the-art research since earlier studies in the 1960s on clear-air turbulence, explains recent new understanding into turbulence generation by thunderstorms, and summarizes future challenges in turbulence prediction and avoidance.

Blended Learning. New Challenges and Innovative Practices

This book constitutes the refereed proceedings of the 10th International Conference on Blended Learning, ICBL 2017, held in Hong Kong, China, in June 2017. The 42 papers presented were carefully reviewed and selected from 100 submissions. The papers are organized in topical sections named: Keynotes; Experiences in Blended Learning; Strategies in Blended Learning; Assessment for Blended Learning; Computer-Support Collaborative Learning; Improved Flexibility of Learning Processes; Open Educational Resources; Pedagogical and Psychological Issues.

Online Library Hkiaat Paper 6 Past

The true story of an adventurer-turned-warrior fighting poachers and traffickers to protect animals from extinction. Staging heart-pounding, espionage-style raids, Ofir Drori and his organization, The Last Great Ape (LAGA), have put countless poachers and traffickers of endangered species behind bars, and they have fought back against a Kafkaesque culture of corruption. Before Ofir arrived in Cameroon, no one had ever even tried. The Last Great Ape follows a young Ofir on fantastical adventures as he crosses remote African lands by camel, on a horse, and in dug-out canoes, while living with exotic tribes and struggling against nature at its rawest: charging elephants and hyenas, flash floods, and the need to eat river algae and snails to stay alive. The story moves from places of extreme beauty to those of the darkest horror: the war zones of Sierra Leone and Liberia. Ofir begins to work as a photojournalist in order to expose his shocking encounter with war victims and child soldiers. His experiences forge in him a resolution to become an activist and to fight for justice. The search for a cause eventually leads him to Cameroon. When Ofir discovers that no one is fighting to disprove Jane Goodall's dark prophesy that apes in the wild will be extinct in twenty years, he decides that he is the man to step in; because he knows he can make a difference, he sees it as his responsibility. And LAGA is born. The Last Great Ape is a story of the fight against extinction and the tragedy of endangered worlds, not just of animals but of people struggling to hold onto their culture. This book reveals the intense beauty and strife that exist side by side in Africa, and Ofir makes the case that activism

and dedication to a cause are still relevant in a cynical modern world. This dangerous and dramatic story is one of courage and hope and, most importantly, a search for meaning.

Auditing In A Computerised Environment

This book explores important issues in human capital in human resource management as it relates to management information systems (MIS). It highlights how management information systems are implemented and the potential for employee resistance, offering behavioral strategies to involve employees in adopting effective MIS and in overcoming resistance during change. The authors also look at the available research that focuses on the changing skills requirements of employees in the context of both MIS perspectives and HRM perspectives. They address how current trends have evolved into a hyper-emerging market of competitive advantage and fast-changing environments toward globalization. The authors also address: workforce planning and management systems strategic human resource management re-engineering work processes for improved productivity work-force diversity the integration of MIS-HRIS and employee involvement human resource globalization and MIS implications the impact of digital technology on decentralized work sites organizational continuous improvement programs
