The past 30 years have seen the emergence of a growing desire worldwide to take positive actions to restore and protect the environment from the degrading effects of all forms of pollution: air, noise, solid waste, and water. Because pollution is a direct or indirect consequence of waste, the seemingly idealistic demand for “zero discharge” can be construed as an unrealistic demand for zero waste. However, as long as waste exists, we can only attempt to abate the subsequent pollution by converting it to a less noxious form. Three major questions usually arise when a particular type of pollution has been identified: (1) How serious is the pollution? (2) Is the technology to abate it available? and (3) Do the costs of abatement justify the degree of abatement achieved? The principal intention of the Handbook of Environmental Engineering series is to help readers formulate answers to the last two questions. The traditional approach of applying tried-and-true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering, and has accounted in large measure for the establishment of a “methodology of pollution control.” However, realization of the ever-increasing complexity and interrelated nature of current environmental problems makes it imperative that intelligent planning of pollution abatement systems be undertaken.

This is an exhilarating book, written by one of sociology’s most imaginative theorists and critics. Professor Corrigan proceeds by turning old answers into new questions. He draws on a rich tradition of thought from sociology, philosophy, structuralism, post-structuralism, and literary criticism to explore major ongoing problems in everyday life: moral regulation, schooling, the capitalist world economy, intellectuals, and the problem of difference, masculinity. The result is one of the most dazzling contributions to critical sociology published in recent years.

Learn how to handle a cruising sailboat in as little as seven days—even if you’ve never sailed before! Who says you have to be an experienced daysailor before you can think about cruising? Steve and Doris Colgate know that most of us don’t have that kind of time. At the Offshore Sailing School, the Colgates have helped more than 100,000 adults—three-quarters of whom started as beginning sailors or complete newcomers--take the helm of a midsize cruising sailboat. Now Fast Track to Cruising offers these proven instructional methods to all aspiring sailors with big dreams and little time. This is the very first guide that teaches sailing and cruising together, taking you from your first sail to independent cruising in one leap. You can make that leap in as little as seven days—as in the Colgates’ “Fast Track to Cruising” course—or you can get there at a more leisurely pace. Either way, no other book will take you from your first tacking or docking maneuver to a mastery of navigation and diesel engines as efficiently as this one. "America's most experienced sailing instructors present a thorough and easy to understand look at

cruising. Leisure time is precious. Safety is paramount. The Colgates will help you maximize your time on the water."--Gary Jobson, ESPN's lead sailing analyst and editor at large for Cruising World and Sailing World "Doris and Steve Colgate understand that people want to reach their sailing goals as quickly as possible and they've built the excellent Fast Track program to accomplish it."--Bernadette Bernon, former editorial director of Cruising World magazine "Together Steve and Doris Colgate have been teaching beginners to sail for over half a century. Disorders of the Neonatal Airway serves as a comprehensive, multidisciplinary resource for all practitioners who care for neonates with airway disorders. With the evolution of advances in neonatology and neonatal airway care over the past three decades, the survival rate and life expectancy of premature newborns have dramatically increased to well over 50% in 24-25 week gestation infants. Unfortunately, survival with long-term intubation has brought a corresponding increase in acquired airway disorders needing collaborative high level neonatal and otolaryngological care. Additionally, with the advent of fetal therapy, congenital airway disorders now make up a substantial number of neonates with complex airway disorders. Because of this fact, there has been increased focus on the multidisciplinary evaluation and management of neonatal airway disorders. The book is organized into three sections: the first focuses on Malformations and Deformations, the second focuses on Assessment, Evaluation, and Treatment, and the third discusses Education, Simulation, and Quality. As one of the only comprehensive resources on the topic, Disorders of the Neonatal Airway focuses on a multidisciplinary approach to the neonatal airway. This unique approach makes this reference a must read for practitioners from many disciplines. Lung disease is a major indication for the admittance of the neonate to a specialist intensive care unit, and is a particularly common complication in the pre-term baby where the lungs are insufficiently developed at birth and easily damaged by early treatments. As a consequence, this is an area of intensive international research activity. In this comprehensive update of the well-received first edition, leading researchers from all over the world have been invited to contribute in their specialist areas. The book continues to provide detailed coverage of the pathogenesis, clinical and laboratory features and management of lung disorders in the neonate, with increased emphasis on the underlying immunology and major additions to the sections on respiratory support, chronic lung disease and abnormalities in lung growth and development to reflect the changes that have occurred in these areas since the previous edition appeared in 1995. Providing an unrivalled up-to-date statement on the problems that are faced in the neonatal intensive care unit on a daily basis, this is an invaluable addition to the bookshelves of neonatologists and other personnel involved in the care of critically ill babies.
