Adopting a unique approach, this book provides a thorough, one-stop introduction to nanoscience and self-assembly of nanomaterials composed of such materials as metals, metal oxides, metal sulphides, polymers, and biopolymers. Clearly divided into three sections covering the main aspects of nanoscience, the first part deals with the basic principles of nanoscale science. Alongside essential approaches and forces, this section also covers thermodynamics, phase transitions, and applications to biological systems. The second and third parts then go on to provide a detailed description of the synthesis of inorganic and organic nanoparticles, respectively. With its interdisciplinary content of importance to many different branches of nanoscience, this is essential reading for material scientists, physicists, biophysical chemists, chemical engineers, and biotechnologists alike.

666 Photography is an Austin, Texas based company that specializes in retro/vintage photography. Their props are handmade, their backdrops are handpainted, and if they can't find the perfect costume, they make it! The awe-inspiring staged playful pop creations collected here feature such fantasy elements as modern women recast as High-Baroque Madonnas; amazing 1940s hair styles, dried-flower corsets, pin-up girls riding carousels, circus glamour, and ironic recreations of Weimar Germany cabaret and decadent 1920s Berlin. The visual invention is stunning. Often inspired by icons of female beauty and power ranging from mermaids to Mucha, these unique photographic visions have attracted such fans as Courtney Love. Collected here, they become a riot of astounding creativity and color.

The iPad 2 is faster, lighter, and more versatile than its predecessor, but there's still no printed guide to using its amazing features. That's where this full-color Missing Manual comes in. Learn how to stream HD video, make video calls, manage your email, surf the Web, listen to music, play games, and maybe even do a little iWork. This is the book that should have been in the box. Build your media library. Fill your iPad with music, movies, TV shows, eBooks, photos, and more. Share with others. Stream music, HD movies, TV shows, and more, to and from your iPad. Create your own media. Use the iPad's new Photo Booth, iMovie, and GarageBand apps to express yourself. Get online. Connect through WiFi or Wi-Fi+3G, and surf with the iPad's faster browser. Place video calls. See who's talking with the iPad's FaceTime app and its two cameras. Consolidate your email. Read and send messages from any of your accounts. Learn undocumented tips and tricks. Get the lowdown on cool iPad secrets and workarounds.

Livestock in a Changing Landscape, Volume 1

Life with the Amish isn't always milking cows, shucking corn and baking apple pies. Travel alongside these eight Indiana youth/newlyweds on their two-week expedition deep in the mountains of Colorado. They encounter some very unexpected happenings that affect them profoundly. As recorded by their own pens – sometimes hilarious, sometimes hair-raising incidents – from the top of the Sears (Willis) Tower to the top of the Rockies. In their own words: Reality Strikes. Here I am in the mountains, miles from civilizationNobody knows where I amno road close bythe foremost thing on my mind is my fellow campers. They don't have the slightest clue what swallowed me up! I half-awaken to some disgruntled sounds from David's tentSometime later we're jerked awake by the loud POP of the pistol. The night is pitch black and makes me aware that I am quite aloneOccasionally, I swivel my head around to check for eyes in the dark. If a bear smelled all this blood and fresh meat he'd probably think I owed him a handout Not for the fainthearted Thinking about taking a vacation in the mountains to get away from it all? Read this group's account to give you a sneak preview of what to expect. But then, you might not meet up with a TV reporter's microphone thrust at you – or realize the sun is setting and you are on the wrong side of the mountain, alone, with no clue in which direction camp is.

Graveyard Scavenger Hunt

This frighteningly funny collection of Halloween poems is perfect for sharing! It's that time of year again… The wind is howling, the leaves are blowing. A sliver of moon is barely showing. Engineers are becoming increasingly aware of the problems caused by vibration in engineering design, particularly in the areas of structural health monitoring and smart structures. Vibration is a constant problem as it can impair performance and lead to fatigue, damage and the failure of a structure. Control of vibration is a key factor in preventing such detrimental results. This book presents a homogenous

treatment of vibration by including those factors from control that are relevant to modern vibration analysis, design and measurement. Vibration and control are established on a firm mathematical basis and the disciplines of vibration, control, linear algebra, matrix computations, and applied functional analysis are connected. Key Features: Assimilates the discipline of contemporary structural vibration with active control Introduces the use of Matlab into the solution of vibration and vibration control problems Provides a unique blend of practical and theoretical developments Contains examples and problems along with a solutions manual and power point presentations Vibration with Control is an essential text for practitioners, researchers, and graduate students as it can be used as a reference text for its complex chapters and topics, or in a tutorial setting for those improving their knowledge of vibration and learning about control for the first time. Whether or not you are familiar with vibration and control, this book is an excellent introduction to this emerging and increasingly important engineering discipline.

Duane Litfin, former president of Wheaton College, explores how Paul's theology of preaching can inform the church's preaching today. Through a detailed study of 1 Corinthians 1-4, Litfin shows how Paul's method of proclamation differed from Greco-Roman rhetoric and how Pauline preaching can be a model for the contemporary preaching task.

The toxic costs of anger are well understood: sabotaged careers, alienated family and friends, and even physical damage to a point where illness or an early death can result. Unlike previous models of anger control that began by combating anger-

provoking trigger thoughts at a relatively low level of anger, The Anger Control Workbook introduces you to a streamlined new approach that allows you to exercise control at a higher level of anger so that fewer steps are involved in managing all of your problem anger expressions. Throughout, the book offers techniques in a clear, step-by-step format, arranged to make it easy to tailor a program to your own personal obstacles and triggering events

The fifth edition of The Complete Idiot's Guide to Computer Basics places the reader in charge of the computer, rather than the other way round, and places the focus on software troubleshooting rather than hardware techno-babble. The reader wants to do something practical with his or her computer - this book shows them how. It covers basic office programs and how to manage photo, video and music files. It offers advice on safe web-surfing, including coverage of newsgroups, message boards and mailing lists. There are new green computing initiatives that help protect the environment. It includes maintenance and upgrading information.

Paul's Theology of Preaching

The rapidly changing nature of animal production systems, especially increasing intensification and globalization, is playing out in complex ways around the world. Over the last century, livestock keeping evolved from a means of harnessing marginal resources to produce items for local consumption to a key component of global food chains. Livestock in a Changing Landscape offers a comprehensive examination of these important and far-reaching trends. The books are an outgrowth of a collaborative effort involving international nongovernmental organizations including the United Nations Food and Agriculture Organization (UN FAO), the International Livestock Research Institute (ILRI), the Swiss College of Agriculture (SHL), the French Agricultural Research Centre for International Development (CIRAD), and the Scientific Committee for Problems of the Environment (SCOPE). Volume 1 examines the forces shaping change in livestock production and management; the resulting impacts on landscapes, land use, and social systems; and potential policy and management responses. Volume 2 explores needs and draws experience from region-specific contexts and detailed case studies. The case studies describe how drivers and consequences of change play out in specific geographical areas, and how public and private responses are shaped and implemented. Together, the volumes present new, sustainable approaches to the challenges created by fundamental shifts in livestock management and production, and represent an essential resource for policy

makers, industry managers, and academics involved with this issue.

[In this book, the authors] are interested not only in what humans are and were like; [but they are] also interested in why they got to be that way, in all their variety. When there are alternative explanations, [the authors] try to communicate the necessity to evaluate them logically as well as on the basis of the available evidence. Throughout the book, [they] try to communicate that no idea, including ideas put forward in textbooks, should be accepted even tentatively without supporting tests that could have gone the other way. -Pref.

Vibration with Control

This is the fifth edition of a well-established textbook. It is intended to provide a thorough coverage of the fundamental principles and techniques of classical mechanics, an old subject that is at the base of all of physics, but in which there

has also in recent years been rapid development. The book is aimed at undergraduate students of physics and applied mathematics. It emphasizes the basic principles, and aims to progress rapidly to the point of being able to handle physically and mathematically interesting problems, without getting bogged down in excessive formalism. Lagrangian methods are introduced at a relatively early stage, to get students to appreciate their use in simple contexts. Later chapters use Lagrangian and Hamiltonian methods extensively, but in a way that aims to be accessible to undergraduates, while including modern developments at the appropriate level of detail. The subject has been developed considerably recently while retaining a truly central role for all students of physics and applied mathematics.This edition retains all the main features of the fourth edition, including the two chapters on geometry of dynamical systems and on order and chaos, and the new appendices on conics and on dynamical systems near a critical point. The material has been somewhat expanded, in particular to contrast continuous and discrete behaviours. A further appendix has been added on routes to chaos (period-doubling) and related discrete maps. The new edition has also been revised to give more emphasis to specific examples worked out in detail.Classical Mechanics is written for undergraduate students of physics or applied mathematics. It assumes some basic prior knowledge of the fundamental concepts and reasonable familiarity with elementary differential and integral calculus.

Photovoltaic Power System: Modelling, Design and Control is an essential reference with a practical approach to photovoltaic (PV) power system analysis and control. It systematically guides readers through PV system design, modelling, simulation, maximum power point tracking and control techniques making this invaluable resource to students and professionals progressing from different levels in PV power engineering. The development of this book follows the author's 15-year experience as an electrical engineer in the PV engineering sector and as an educator in academia. It provides the background knowledge of PV power system but will also inform research direction. Key features: Details modern converter topologies and a step-by-step modelling approach to simulate and control a complete PV power system. Introduces industrial standards, regulations, and electric codes for safety practice and research direction. Covers new classification of PV power systems in terms of the level of maximum power point tracking. Contains practical examples in designing grid-tied and standalone PV power systems. Matlab codes and Simulink models featured on a Wiley hosted book companion website.
