Economics: AS and A Level

The year 2018 marks 40 years of reform and development in China (1978–2018). This commemorative book assembles some of the world's most prominent scholars on the Chinese economy to reflect on what has been achieved as a result of the economic reform programs, and to draw out the key lessons that have been learned by the model of growth and development in China over the preceding four decades. This book explores what has happened in the transformation of the Chinese economy in the past 40 years for China itself, as well as for the rest of the world, and discusses the implications of what will happen next in the context of China's new reform agenda. Focusing on the long-term development strategy amid various old and new challenges that face the economy, this book sets the scene for what the world can expect in China's fifth decade of reform and development. A key feature of this book is its comprehensive coverage of the key issues involved in China's economic reform and development. Included are discussions of China's 40

years of reform and development in a global perspective; the political economy of economic transformation; the progress of marketisation and changes in market-compatible institutions; the reform program for state-owned enterprises; the financial sector and fiscal system reform, and its foreign exchange system reform; the progress and challenges in economic rebalancing; and the continuing process of China's global integration. This book further documents and analyses the development experiences including China's large scale of migration and urbanisation, the demographic structural changes, the private sector development, income distribution, land reform and regional development, agricultural development, and energy and climate change policies.

This book provides an in-depth comparative analysis of inequality and the stratification of the digital sphere. Grounded in classical sociological theories of inequality, as well as empirical evidence, this book defines 'the digital divide' as the unequal access and utility of internet communications technologies and explores how it has the potential to replicate existing social inequalities, as well as create new forms of stratification. The Digital Divide examines how various demographic and socio-economic factors including income, education, age and gender, as well as infrastructure, products and services affect how the internet is used and accessed. Comprised of six parts, the first section examines theories of

the digital divide, and then looks in turn at: Highly developed nations and regions (including the USA, the EU and Japan); Emerging large powers (Brazil, China, India, Russia); Eastern European countries (Estonia, Romania, Serbia); Arab and Middle Eastern nations (Egypt, Iran, Israel); Under-studied areas (East and Central Asia, Latin America, and sub-Saharan Africa). Providing an interwoven analysis of the international inequalities in internet usage and access, this important work offers a comprehensive approach to studying the digital divide around the globe. It is an important resource for academic and students in sociology, social policy, communication studies, media studies and all those interested in the questions and issues around social inequality.

Cambridge IGCSE and O Level Economics

The 2012 GCSE English results prompted significant controversy, which ultimately resulted in an application for judicial review. This report sets out the background to these events and identifies lessons to be learned. The problems with GCSE English can be traced back to the 2007-09 development phase of the qualification- in

particular the turbulence which resulted from the shift away from a mostly linear to a modular system, combined with a high proportion of controlled assessment and generous marking tolerances. Exam board experts raised concerns at the time, but these were not acted upon by the regulator (the then-interim Ofqual). Further difficulties arose because of pressures from the school accountability system. The problems experienced with GCSE English in 2012 highlighted serious weaknesses in the moderation of speaking and listening, with consequences for grade awarding. The current status of Ofqual, as an independent regulator accountable to Parliament, is the right one. However, the Coalition Government is bringing in wholesale changes to GCSEs and A levels, to a tight timetable and at the same time. Ofqual must have systems in place. The Committee is also concerned that there is a rush towards separate exam systems for England, Wales and Northern Ireland, without careful reflection on what might be lost, or consensus that this is the right thing to do.

Songs of Ourselves

This World Bank report is a rich compilation of information on teaching learning

materials (TLM) in Africa based on the extensive and multi-faceted experience of the author's work in the education sector in Africa. The study examines a wide range of issues around TLM provision including curriculum, literacy and numeracy, language of instruction policy, procurement and distribution challenges, TLM development and production and their availability, management and usage in schools. It also looks at the role of information and communication technology (ICT) based TLMs and their availability. The study recognizes that improved TLM system management is a critical component in achieving affordable and sustainable TLM provision for all students. This study, which draws from more than 40 Anglophone, Francophone, Lusophone, and Arabic-speaking countries will be particularly useful for policymakers, development partners, and other stakeholders attempting to understand the wide range of issues surrounding the complexity of textbook provision in Sub Saharan Africa.

In a strikingly original and rich portrait of the uses of verse in America, Rubin shows how the sites and practices of reciting poetry influenced readers' lives and helped them to find meaning in a poet's words. By blurring the boundaries between "high" and "popular" poetry as well as between modern and traditional, it creates a fuller, more democratic way of studying our poetic language and ourselves.
