60 years ago, the beautiful island of Jura provided George Orwell the solitude and inspiration he needed to write his political masterpiece, Nineteen Eighty-Four. In 2006, the Scottish Book Trust established their Jura Malt Whisky Writer Retreat Programme to give writers the same peace and space and it is now recognised as one of the best creative opportunities available. In 2007, authors Will Self, Janice Galloway and Philip Gourevitch took a month out, writing and living in the luxurious Distillery Lodge, to work on specially commissioned stories, published here for the first time.

Will Self burrows down through the intersections of time, place and psyche to explore some of our deepest fears and anxieties with characteristic fearlessness and jagged humour. 'Very Little' is ostensibly the account of a curative journey to Canada and the USA, but in fact the record of a nematode's progress, as the worm of obsession - with scale and packing and the 'stuff' of our lives - bores through a mind in extremis. 'Walking to Hollywood' is an extreme satire on celebrity, in which the narrator believes that everyone he meets is played by a famous actor, and that only he can solve the mystery of who murdered the movies. 'Spurn Head' leads Self to a tormented sojourn with a madman whose house is sliding over the edge of a cliff, to a game of checkers with Death, and finally to an encounter with one of Swift's immortal Struldbruggs and a march through a tear in time itself. In Walking to Hollywood Will Self pushes memoir to the limits of invention.

This comprehensive book covers Over 40 of the most used supplement ingredients that create many well known diet supplements. Will Brink uses his 20+ years in the supplement industry to break through the hype and mystery surrounding the base components of all supplements - their ingredients - and explains how they work using a combination of scientific and real world data. Will puts the power of knowledge into the readers hands by teaching them the how to judge if a supplement works based on its ingredients, using an easy to understand format for the beginner, but also adds additional scientific extrapolation for the more advanced and experienced.

David Hedison, who plays a tiny human-headed insect menaced by a spider at the climax of the SF classic *The Fly* (1958), says the moviemakers spoiled the scene by giving him a squeaky voice. "Imagine if, as the camera moved in closer, you actually heard me screeeeaming for my life," the actor rhapsodizes. "That is horror. THAT is horror." In Tom Weaver's eighth interview book, Hedison-and 22 other moviemakers-talk about their horror and science fiction movie experiences as part of such films and TV series as *The Blob*, *It Came from Outer Space*, *Tarzan the Ape Man*, *Star Trek*, *The Wild Wild West*, *Somewhere in Time*, *The Devil Bat* and *Forbidden Planet*. Among those interviewed are Dan O'Herlihy, Eve Brent, Kate Phillips, John Alvin, Anthony Cardoza, Tod Griffin, Alex and Richard Gordon, Denny Miller, Andrey Dalton, Suzanne Kaaren, and Warren Stevens. Full credits are provided for the actors, actresses, and producers.

This book offers a clearly written, entertaining and comprehensive source of medical information for both writers and readers of science fiction. Science fiction in print, in movies and on television all too often presents dubious or simply incorrect depictions of human biology and medical issues. This book explores the real science behind such topics as how our bodies adapt to being in space, the real-life feasibility of common plot elements such as suspended animation and medical nanotechnology, and future prospects for improving health, prolonging our lives, and enhancing our bodies through technology. Each chapter focuses on a single important science fiction-related subject, combining concise factual information with examples drawn from science fiction in all media. Chapters conclude with a "Bottom Line" section summarizing the most important points discussed in the chapter and giving science fiction writers practical advice on how to incorporate them into their own creations, including a list of references for further reading. The

The Liver: Porta Malorum (The Gateway to Disease) presents the fundamental aspects and significance of liver as a detoxicating organ. This book explains the diversity of the signs produced by liver damage. Organized into 17 chapters, this book begins with an overview of the process of assimilation through the activities of the liver cells. This text then discusses the emptying mechanisms of the gall-bladder. Other chapters consider the various diseases, including jaundice,

pancreatitis, Bright's disease, bronchial asthma, toxic goiter, hemorrhoids, spontaneous thrombosis in the rectal veins, and varicose veins of the leg. This book discusses as well the generally accepted theory concerning the etiology of appendicitis, with emphasis on bacterial inflammation. The final chapter deals with rectal varicose disorders. This book is a valuable resource for hepatologists, pathologists, morphologists, and physicians. Medical students and research workers interested in the fundamental aspects of the liver will also find this book extremely useful.

Although the history of organ transplant has its roots in ancient Christian mythology, it is only in the past fifty years that body parts from a dead person have successfully been procured and transplanted into a living person. After fourteen years, the three main issues that Robert Veatch first outlined in his seminal study *Transplantation Ethics* still remain: deciding when human beings are dead; deciding when it is ethical to procure organs; and deciding how to allocate organs, once procured. However, much has changed. Enormous strides have been made in immunosuppression. Alternatives to the donation model are debated much more openly—living donors are used more widely and hand and face transplants have become more common, raising issues of personal identity. In this second edition of *Transplantation Ethics*, coauthored by Lainie F. Ross, transplant professionals and advocates will find a comprehensive update of this critical work on transplantation policies.

In this collection of four linked stories, newly reissued by Grove, Will Self takes aim at the disease and decay that target the largest of human organs: the liver. Set in locales as toxic as a London drinking club and mundane as a clinic in an orderly Swiss city, the stories distill the hard lives of their subjects, whether alcoholic, drug addict, or cancer patient. In “*Foie Humaine*,” set at the Plantation Club, it’s always a Tuesday afternoon in midwinter, and the shivering denizens of this dusty realm

spend their days observing its proprietor as he force-feeds the barman vodka-spiked beer. Joyce Beddoes, protagonist of "Leberknödel," has terminal liver cancer and is on her way to be euthanized in Zurich when, miraculously, her disease goes into remission. In "Prometheus," a young copywriter at London's most cutting-edge ad agency has his liver nibbled by a griffon thrice daily, but he's always in the pink the following morning and ready to make that killer pitch. If blood and bile flow through liverish London, the two arteries meet in "Birdy Num Num," where career junky Billy Chobham performs little services for the customers who gather to wait for the Man, while in his blood a virus pullulates. A moving portrayal of egos, appetites, and addictions, Liver is an extraordinary achievement from one of the most talented minds working today.

Based on the latest research, Skinny Liver is an authoritative, easy-to-follow guide not just for your liver, but for your whole body. The liver is the seat of our overall health and wellness and the health of nearly every organ is intimately connected with our liver. A healthy liver is essential to a fully functioning body, but our modern sedentary lifestyle and unhealthy eating habits can truly damage the liver--and damage our health overall. A silent health crisis is impacting one-third of the American population---nonalcoholic fatty liver disease (NAFLD). Because its symptoms often don't manifest until the liver is seriously compromised, many

people are not aware that they are at risk. Did you know that if you have fatty liver disease, you are more likely to develop cardiovascular disease (heart attack and stroke), and potentially several devastating conditions such as liver cirrhosis and liver cancer? Did you know that fat is as dangerous as alcohol to the liver? Award-winning dietitian Kristin Kirkpatrick and hepatologist Dr. Ibrahim Hanouneh have teamed up for a life-changing program that will help you achieve optimal health. Skinny Liver's four-week program shares the steps you can take to get your liver health back on track, with everything from exercise to healthy eating and other lifestyle changes--along with delicious liver-friendly recipes.

Some people lost their sense of proportion, others their sense of scale, but Simon Dykes, a middle-aged, successful London painter, has lost his sense of perspective in a most disturbing fashion. After a night of routine, pedestrian debauchery, traipsing from toilet to toilet, and imbibing a host of narcotics on the way, Simon wakes up cuddled in his girlfriend’s loving arms. Much to his dismay, however, his girlfriend has turned into a chimpanzee. To add insult to injury, the psychiatric crash team sent to deal with him as he flips his lid is also comprised of chimps. Indeed, the entire city is overrun by clever primates, who, when they are not

jostling for position, grooming themselves, or mating some of the females, can be found driving Volvos, hanging out on street corners, and running the world. Nonetheless convinced that he is still a human, Simon is confined to the emergency psychiatric ward of Charing Cross Hospital, where he becomes the patient of Dr. Zack Busner, clinical psychologist, medical doctor, anti-psychiatrist, and former television personality—an expert at the height of his reign as alpha male. As Busner attempts to convince him that “everyone who is fully sentient in this world are chimpanzees,” Simon struggles with the horrifying delusion that he is really a human trapped in a chimp’s body. Written with the same brilliant satiric wit that has distinguished Self’s earlier fiction, *Great Apes* is a hilarious, often disturbing, and absolutely original take on man’s place in the evolutionary chain. In a strange and twisted tale that recalls Jonathan Swift and Franz Kafka’s *Metamorphosis*, Will Self’s comic genius is impossible to ignore.

avoid, which supplements accelerate the liver's cleansing abilities, and how to perform liver exercises and massage • Details the 9 plants that are most effective in detoxifying the liver, with instructions for their safe use • Includes charts and questionnaires to determine to what degree your liver function is compromised The liver is key to the optimal health of the body. Shouldering the heaviest responsibility for keeping the body's internal terrain clean, the liver not only filters toxins and cellular by-products out of the blood like other excretory organs, it also neutralizes poisons, microbes, heavy metals, and carcinogens. By supporting the liver, we support the health of the entire body. In this practical guide to cleansing and detoxifying the liver, Christopher Vasey shows how many features of modern living--such as overeating, medications, cigarettes, alcohol, food additives, and environmental pollution--overtax this powerhouse of an organ. This leads to weakening of the liver and congestion with toxins, which in turn can lead to illness, including cardiovascular problems, allergies, headaches, constipation, respiratory issues, and skin conditions, as the toxins the overburdened liver cannot filter out find their way to other areas of the body. Detailing how the liver functions, the author explains how to use diet, herbs, massage, and other practices to detoxify, strengthen, and regenerate your liver. He includes simple charts and questionnaires to help you determine to what degree your liver function is compromised. He shows how a simple change of diet along with the use of hepatic herbs will often have immediate benefits for the liver and the immune system. He explains specific foods to avoid and how taking supplements, such as trace

elements of sulfur, accelerate the liver's ability to neutralize heavy metals. He details 9 plants that are most effective in detoxifying the liver, such as dandelion and rosemary, and provides instructions for their safe use. He also describes liver exercises and massage techniques as well as the use of external aids, such as a hot-water bottle, to stimulate liver activity. Offering an accessible yet detailed approach to supporting the liver, the author shows how bringing the liver back to full health and function has far-reaching effects for the whole body.
