Jordan-Young has written a stunning book that demolishes most of the science associated with the dominant paradigm of the development of sex and gender identity, behavior, and orientation. The current paradigm, brain organization theory, proposes: "Because of early exposure to different sex hormones, males and females have different brains"; and these hormones also create "gay" and "straight" brains. Jordan-Young interviewed virtually every major researcher in the field and reviewed hundreds of published scientific papers. Her conclusion: "Brain

organization theory is little more than an elaboration of longstanding folk tales about antagonistic male and female essences and how they connect to antagonistic male and female natures." She explains, in exquisite detail, the flaws in the underlying science, from experimental designs that make no statistical sense to "conceptually sloppy" definitions of male and female sexuality, contradictory results, and the social construction of normality. Her conclusion that the patterns we see are far more complicated than previously believed and due to a wider range of variables will shake up the research community and alter public perception.

The Interpretation of Cultures

Life of Pi is a masterful and utterly original novel that is at once the story of a young castaway who faces immeasurable hardships on the high seas, and a meditation on religion, faith, art and life that is as witty as it is profound. Using the threads of all of our best stories, Yann Martel has woven a glorious spiritual adventure that makes us question what it means to be alive, and to believe.

Sherlock Holmes. It is 1872, and a series of gruesome murders is the talk of London. Mycroft Holmes--now twenty-six and a force to be reckoned with at the War Office--has no interest in the killings; however, his brother Sherlock has developed a distasteful fascination for the macabre to the detriment of his studies, much to Mycroft's frustration. When a ship carrying cargo belonging to Mycroft's best friend Cyrus Douglas runs aground, Mycroft persuades Sherlock to serve as a tutor at the orphanage that Douglas runs as a charity, so that Douglas might travel to see what can be salvaged. Sherlock finds himself at home among the street urchins, and when a boy dies of a suspected drug overdose, he decides to investigate, following a trail of strange subterranean symbols to the squalid opium dens of the London docks. Meanwhile a meeting with a beautiful Chinese woman leads Mycroft to the very same mystery, one that forces him to examine the underbelly of the opium trade that is enriching his beloved Britain's coffers. As the stakes rise, the brothers find that they need one another's assistance and counsel. But a lifetime of keeping secrets from each other may have catastrophic consequences

Great Adaptations

Common Sense Mathematics is a text for a one semester college-level course in quantitative literacy. The text emphasizes common sense and common knowledge in approaching real problems through popular news items and finding useful mathematical tools and frames with which to address those questions. We asked ourselves what we hoped our students would remember about this course in ten year's time. From that ten year perspective thoughts about syllabus—"what topics should we cover?"—seemed much too narrow. What matters more is our wish to change the way our students' minds work—the way they approach a problem, or, more generally, the way they approach the world. Most people "skip the numbers" in newspapers, magazines, on the web and (more importantly) even in financial information. We hope that in ten years our students will follow the news, confident in their ability to make sense of the numbers they find there and in their daily lives. Most quantitative reasoning texts are arranged by mathematical topics to be mastered. Since the mathematics is only a part of what we hope students learn, we've chosen another strategy. We look at real life stories that can be best understood with careful reading and a little mathematics.

In his book "Jurassic Park" (and in the movie based on the book), Michael Crichton

describes a crazed professor who through techniques of genetic engineering manages to recreate the dinosaurs and giant ferns of 65 million years past. Once the giant Tyrannosaurus Rex is brought to life, a powerful dynamics sets in: evolution. The prehistoric world embarks on a collision course with man. Researching his book, Crichton had been reading up on paleontology and on the mathematical theory of evolution, catastrophes, and chaos. Crichton explains some of the twists of nonlinear mathematics that are rewriting not only thermodynamics, physics, and chemistry (that all grapple with evolving and turbulent processes) but also paleontology, genetics, medicine and even anthropology. Collapse and chaos is not limited to prehistoric animal kingdoms and ancient civilizations. The collapse of the Soviet Union and the political and economic chaos in its aftermath demonstrate that modern civilizations are just as vulnerable. This book aims at reexamining some main portions of the discipline of economics from the point of view of economic change and creativity. There are two aspects to this perspective. First, diversity and complexity. The range of different kinds of high technology products available to consumers and producers increases rapidly. Each product is the result of a long and complex production hierarchy. As these hierarchies grow, they deliver ever more diversified and complex high tech goods. Other hierarchies fall by the wayside.

Few of us have been spared the agonies of intimate relationships. They come in many shapes: loving a man or a woman who will not commit to us, being heartbroken when we're abandoned by a lover, engaging in Sisyphean internet searches, coming back lonely from bars, parties, or blind dates, feeling bored in a relationship that is so much less than we had envisaged - these are only some of the ways in which the search for love is a difficult and often painful experience. Despite the widespread and almost collective character of these experiences, our culture insists they are the result of faulty or insufficiently mature psyches. For many, the Freudian idea that the family designs the pattern of an individual's erotic career has been the main explanation for why and how we fail to find or sustain love. Psychoanalysis and popular psychology have succeeded spectacularly in convincing us that individuals bear responsibility for the misery of their romantic and erotic lives. The purpose of this book is to change our way of thinking about what is wrong in modern relationships. The problem is not dysfunctional childhoods or insufficiently self-aware psyches, but rather the institutional forces shaping how we love. The argument of this book is that the modern romantic experience is shaped by a fundamental transformation in the ecology and architecture of romantic choice. The samples from which men and women choose a partner, the modes of evaluating prospective partners, the very importance of choice and autonomy and what people imagine to be the spectrum of their choices: all these aspects of choice have transformed the very core of the will, how we want a partner, the sense of worth bestowed by relationships, and the organization of

desire. This book does to love what Marx did to commodities: it shows that it is shaped by social relations and institutions and that it circulates in a marketplace of unequal actors.

studying these animals can provide deep insights into how life evolved, but also how scientific discovery can be filled with adventure and fun. Beginning with the star-nosed mole, Catania reveals what the creature's nasal star is actually for, and what this tells us about how brains work. He explores how the deceptive hunting strategy of tentacled snakes leads prey straight to their mouths, how eels use electricity to control other animals, and why emerald jewel wasps make zombies out of cockroaches. He also solves the enigma of worm grunting—a traditional technique in which earthworms are enticed out of the ground—by teaming up with professional worm grunners. Catania demonstrates the merits of approaching science with an open mind, considers the role played by citizen scientists, and illustrates that most animals have incredible, hidden abilities that defy our imagination. Examining some strange and spectacular creatures, *Great Adaptations* offers a wondrous journey into nature's grand designs.

Critical Thinking

This fascinating, entertaining and often gruelling book by James Mills, examines the lunatic asylums set up by the British in nineteenth-century India. The author asserts that there was a growth in asylums following the Indian Mutiny, fuelled by the fear of itinerant and dangerous individuals, which existed primarily in the British imagination. Once established though, these asylums, which were staffed by Indians and populated by Indians, quickly became arenas in which the designs of the British were contested and confronted. Mills argues that power is everywhere and is behind every action; colonial power is therefore just another way to assert control over the less powerful. This social history draws on official archives and documents based in Scotland, England and India. This book is essential reading for anyone interested in history, sociology, or the general interest reader.

is a formidable task to read and analyze Van Gogh's nearly eight hundred letters due to the sheer bulk and complexity of the collection. Reading Vincent van Gogh is at once an interpretive guide to the letters and a distillation of Van Gogh's key themes and ideas. This is the third book by Patrick Grant on the letters of Vincent van Gogh. It builds on his previous work in *The Letters of Vincent van Gogh* (2014), a practical-critical study, and "My Own Portrait in Writing" (2015), a literary theoretical analysis that draws on the domain of modern literary studies. In the hands of Patrick Grant, the extraordinary literary achievements of Vincent van Gogh are explained and exemplified and claims that the well-known artist was also a great writer are confirmed.
