The front-wheel-drive Saab 96 made the brand into a rally icon in the 1960s. It succeeded in events as diverse as the Monte Carlo, Britain's RAC rally, special stage events in every Scandinavian country, and the rough-and-tough Spa-Sofia-Liege Marathon. The big change came in 1967, when the 96 became the V4. Works cars continued to be competitive in carefully chosen events for many years, and when they became outdated, the V4's successors – the much larger and more powerful 99 and 99 Turbo types – proved that Saab wasn't done with rallying yet. More than any other car of its era, the 96 and V4 models proved that front-wheel-drive allied to true superstar driving could produce victory where no-one expected it.

Die Analyse eines Verkehrsunfalls erfordert zusätzliches Wissen, das im Normalfall nicht während des Studiums vermittelt wird. Daher wird die Analyse von Verkehrsunfällen in der Regel von spezialisierten Sachverständigen vorgenommen. Das dazu nötige Wissen wurde Anfang der 80er Jahre bereits in einer früheren Auflage dieses Handbuchs veröffentlicht. Das Autorenteam besteht aus Experten auf ihrem jeweiligen Gebiet und stellt die Arbeitsmittel in zeitgemäßer Darstellung bereit. Dabei werden computergestützte Arbeitsmethoden berücksichtigt. Die zweite Auflage des Buches wurde um einen Abschnitt über Leitplanken ergänzt. Neben den technischen Spezifikationen und der Projektierung fanden besonders die Bauarten für Motorradfahrer und die Testsimulation Beachtung.

What started off as an idea from Swiss watchmaker Swatch eventually evolved into the successful launch of the smart brand, now an integral part of the Mercedes-Benz family and -- in its first ten years -- achieving sales of more than three quarters of a million cars around the world. It hasn't all been plain sailing for smart, though. Well-publicized financial woes, the launch of at least one inappropriate model range and the subsequent rationalization of the entire product line-up meant plenty of problems along the way. But throughout it all, fans of the smart concept have remained loyal to the brand and sales of the fortwo city car continued to prosper. These days, the future looks rosier. An all-new for two model range was launched in 2007, along with the announcement of the long-awaited debut of the smart brand into the American market for 2008. The latest model is more sophisticated and more in tune with today's buyers tastes, while losing none of the inventiveness, practicality and sheer chic appeal of its predecessors. In "The Little Book of Smart," author and smart fanatic Paul Jackson guides us through the entire history of the brand, its highs and lows, its successes and failures, and on to today -- with the very latest for two line-up promising major sales worldwide and, of course, helping to pave the way for a future for smart in the USA. It's a fascinating tale, told succinctly and in an entertaining style, and complemented by full color photography throughout.

According to Johann Wolfgang Von Goethe's (1740-1832) *Mineralogy and Geology*, "The history of science is science." A sesquicentennial later, one may state that the history of high performance polymers is the science of these important engineering polymers. Many of the inventors of these superior materials of construction have stood on the thresholds of the new and have recounted their experiences (trials, tribulations and satisfactions) in the symposium and in their chapters in this book. Those who have not accepted the historical approach in the past, should now recognize the value of the historical viewpoint for studying new developments, such as general purpose polymers and, to a greater degree, the high performance polymers. To put polymer science into its proper perspective, it's worth recalling that historically, the ages of civilization have been named according to the materials that dominated that period. First there was the Stone Age eventually followed by the Tin, Bronze, Iron and Steel Ages. Today many historians consider us living in the Age of Synthetics: Polymers, Fibers, Plastics, Elastomers, Films, Coatings, Adhesives, etc. It is also interesting to note that in the early 1980's, Lord Todd, then President of the Royal Society of Chemistry was asked what has been chemistry's biggest contribution to society. He felt that despite all the marvelous medical advances, chemistry's biggest contribution was the development of polymerization. Man's knowledge of polymer science is so new that Professor Herman F.
