STEM Activity: Sensational Science will inspire you with super-fun activities and puzzles related to atoms, genes, gravity, acids, magnets, and more! Bite-size factoids explain the scientific theories, scientists and discoveries behind them. Complete the electrical circuits, unscramble the renewable energy sources, spot

the differences in the space station, test your magnet knowledge, colour in the shapes to reveal the awesome x-ray! These are just some of the write-in activities featured in STEM Activity: Sensational Science. Also available: STEM Activity: Amazing Maths, STEM Activity: Extreme Engineering and STEM Activity: Terrific Technology

Study & Master Physical Sciences Grade 11 has been especially developed by an experienced author team for the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Physical Sciences. The comprehensive Learner's Book:

- explains key concepts and scientific terms in accessible language and provides learners with a glossary of scientific terminology to aid understanding.
- provides for frequent consolidation in the Summative assessments at the end of each module
- includes case studies that link science to real-life situations and present balanced views on sensitive issues
- includes 'Did you know?' features providing interesting additional information
- highlights examples, laws and formulae in boxes for easy reference.

The South African Education Policy Review is an invaluable historical archive. It is a source book on policies, conflicts, developments and perspectives on education policy in the period 1993 to 2000. Drawing from a selection of articles from the successful Quarterly Reviews of Education and Training produced by the Education Policy Unit of the University of Witwatersrand, this book provides readers with detailed accounts of educational changes in South Africa over the past decade. It reflects upon significant events, trends and debates and provides insightful analysis of this extremely momentous period of South Africa's history.

This should be the last course a student takes before high school biology. Typically, we recommend that the student take this course during the same year that he or she is taking prealgebra. Exploring Creation With Physical Science provides a detailed introduction to the physical environment and some of the basic laws that

make it work. The fairly broad scope of the book provides the student with a good understanding of the earth's atmosphere, hydrosphere, and lithosphere. It also covers details on weather, motion, Newton's Laws, gravity, the solar system, atomic structure, radiation, nuclear reactions, stars, and galaxies. The second edition of our physical science course has several features that enhance the value of the course: \* There is more color in this edition as compared to the previous edition, and many of the drawings that are in the first edition have been replaced by higher-quality drawings. \* There are more experiments in this edition than there were in the previous one. In addition, some of the experiments that were in the previous edition have been changed to make them even more interesting and easy to perform. \* Advanced students who have the time and the ability for additional learning are directed to online resources that give them access to advanced subject matter. \* To aid the student in reviewing the course as a whole, there is an appendix that contains questions which cover the entire course. The solutions and tests manual has the answers to those questions. Because of the differences between the first and second editions, students in a group setting cannot use both. They must all have the same edition. A further description of the changes made to our second edition courses can be found in the sidebar on page 32.
