Reinventing Project-Based Learning offers educators an accessible guide for maximizing the benefits of project-based learning in today's technology-rich learning environment. This reader-friendly book speaks directly to educators, administrators, and professional development specialists who want to transform learning into a more active, student-driven experience, using technology tools for inquiry, collaboration, and connection to the world beyond the classroom. Examples from educators in many different countries showcase this new vision of instructional design. The book itself follows the arc of a project, providing you with guided opportunities to direct and reflect on your own learning. Starting with an assessment of your readiness to embrace technology-rich, authentic projects, the book then provides strategies to engage with colleagues and build collaboration in project design. The authors then discuss project management, implementation, and troubleshooting. Final chapters focus on assessment, reflection, and sharing. With proven strategies, rich illustrations, classroom examples, and teacher interviews from around the world, Reinventing Project-Based Learning shows how to design authentic projects that make the most of available and emerging tools and technologies. From the Forward by Michael Lesk: Google has now developed services far beyond text search. Google software will translate languages and support collaborative writing. The chapters in this book look at many Google services, from music to finance, and describe how they can be used by students and other library users. Going beyond information resources, there are now successful collaboration services available from Google and others. You can make conference calls with video and shared screens using Google Hangouts, Writing documents with small numbers of colleagues often involved delays while each author in sequence took over the writing and made edits. Today Google Docs enables multiple people to edit the same document at once. An ingenious use of color lets each participant watch in real time as the other participants edit, and keeps track of who is doing what. If the goal is to create a website rather than to write a report, Google Sites is now one of the most popular platforms. Google is also involved in social networking, with services such as Google+ Other tools view social developments over time and space. The Google Trends service, for example, will show you when and where people are searching for topics. Not surprisingly, searches for "swimwear" peak in June and searches for "snowmobile" peak in January. The Complete Guide to Using Google in Libraries, Volume 2: Research, User Applications, and Networking has 30 chapters divided into four parts: Research, User Applications, Networking, Searching. The contributors are practitioners who use the services they write about and they provide how-to advice that will help public, school, academic, and special librarians; library consultants, LIS faculty and students, and technology professionals.
