Cytogenetics plays an important role in understanding the chromosomal and genetic architecture of plant species. Plant Cytogenetics, Third Edition follows the tradition of its predecessors presenting theoretical and practical aspects of plant cytogenetics. Chapters describe correct handling of plant chromosomes, methods in plant cytogenetics, cell division, reproduction methods, chromosome nomenclature, karyotype analysis, chromosomal aberrations, genome analysis, transgenic crops, and cytogenetics in plant breeding. This new edition begins with a brief introduction on the historical aspect of cytogenetics and flows directly into handling of plant chromosomes by classical and modern cytological techniques, classical Mendelian Genetics, brief description of cell division, and chromosome identification by karyotype analysis. The comprehension of cytogenetics is incomplete without information on the role of aneuploidy in associating a gene on a particular chromosome, and the book covers these methodologies as a primary topic. Covering classical to modern cytogenetics, the book presents to the reader the crucial role of cytogenetics in improving crops.

Ansel Adams (1902-1984) produced some of the 20th century's most iconic photographic images and helped nurture the art of photography through his creative innovations and peerless technical mastery. The Camera--the first volume in Adams' celebrated series of books on photographic techniques--has taught generations of photographers how to harness the camera's artistic potential. This time-honored handbook distills the knowledge gained through a lifetime in photography and remains as vital today as when it was first published. Along with visualization, image management, Adams' famous Zone System, and other keys to photographic artistry, The Camera covers 35mm, medium-format, and large-format view cameras, while offering detailed advice on camera components such as lenses, shutters, and light meters. Beautifully illustrated with photographs as well as instructive line drawings, this classic manual belongs on every serious photographer's bookshelf. "Adams is a clear-thinking writer whose concepts

Digital Still Cameras captures the current state of DSC image acquisition and signal processing technology and takes an all-inclusive look at the field, from the history of DSCs to future possibilities. The first chapter outlines the evolution of DSCs, their basic structure, and their major application classes. The next few chapters discuss high-quality optics that meet the requirements of better image sensors, the basic functions and performance parameters of image sensors, and detailed discussions of both CCD and CMOS image sensors. The book then discusses how color theory affects the uses of DSCs, presents basic image processing and camera control algorithms and examples of advanced image processing algorithms, explores the architecture and required performance of signal processing engines, and explains how to evaluate image quality for each component described. The book closes with a look at future technologies and the challenges that must be overcome to realize them. With contributions from many active DSC experts, Image Sensors and Image Processing for Digital Still Cameras offers unparalleled real-world coverage and opens wide the door for future innovation.

This volume on lichen biodiversity and ecology is dedicated to Harrie Sipman. It contains 29 peer-

reviewed contributions by 50 authors. The emphasis is on the biodiversity and ecology of lichens in the tropics, but some papers are devoted to related areas. This volume is indispensable for active lichenologists, especially because it contains keys to several lichen genera. Full monographs are presented for the reinstated genus *Herpothallon* (with 29 species), the new genera *Diaphorographis* (with 2 species), *Sipmaniella* (with 1 species) and *Synarthothelium* (with 2 species), and the genus *Placopyrenium* (with 14 species and 3 varieties). Keys are furthermore given to all cryptothalline species of *Lecidea*, the lichenicolous genus *Sphaerellothecium* and the species of *Cryptothecia* and *Stirtonia* in Thailand. The genus *Trypetheliopsis* is resurrected for *Musaespora*, and all relevant combinations are made. Most papers describe various new species from all over the world, in the genera *Bacidia*, *Buellia*, *Caloplaca*, *Chapsa*, *Cladonia*, *Cryptothecia*, *Diaphorographis*, *Gassicurtia*, *Herpothallon*, *Micarea*, *Phaeographis*, *Placocarpus*, *Placopyrenium*, *Porina*, *Pyrenula*, *Pyxine*, *Stirtonia*, *Strigula*, *Synarthothelium*, *Thelocarpon*, *Thelopsis*, *Xanthoparmelia*, and *Zwackhiomyces*. The newly described *Thelopsis* is intermediate between that genus and *Topelia*, leading to the supposition that these genera are one continuum and should be united. Floristic papers are presented on lichens from Montenegro, Korea, Japan, Thailand, Namibia (including the description of an association), South Africa and the Seychelles and bryophytes of the Galapagos, but specimens from a multitude of other countries ranging from Iceland to Australia are cited throughout the papers. The floristic papers contain also new synonymys and

combinations, partly in additional genera like Mycomicrothelia. One paper is devoted to lichens and global warming. The volume also contains three phylogenetic studies, viz. on all lichen groups with cyanobacteria, on Schistophoron and on Tylophoron, in which a systematic placement for this enigmatic genus is postulated for the first time. The volume is completed by lists of published papers and species described by Harrie Sipman. The volume is richly illustrated and contains many colour photographs, e.g. from all Herpothallon species and from sections through the apothecia of many Lecidea species.

Alice Morse Earle was a social historian of great note at the turn of the century, and many of her books have lived on as well-researched and well-written texts of everyday life in Colonial America. *Curious Punishments of Bygone Days* was published in 1896. It is a catalog of early American crimes and their penalties, with chapters on the pillories, stocks, the scarlet letter, the ducking stool, discipline of authors and books (egad!), and four other horrifying examples of ways in which those who transgressed the laws of Colonial America were made to pay for their sins.
