Solid Modeling Using Pro/Engineer Wildfire

Mechanism Design with Creo Elements/Pro 5.0 is designed to help you become familiar with Mechanism Design, a module in the Creo Elements/Pro (formerly Pro/ENGINEER) software family, which supports modeling and analysis (or simulation) of mechanisms in a virtual (computer) environment. Capabilities in Mechanism Design allow users to simulate and visualize mechanism performance. Using Mechanism Design early in the product development stage could prevent costly redesign due to design defects found in the physical testing phase; therefore, contributing to a more cost effective, reliable, and efficient product development process. The book is written following a project-based learning approach and covers the major concepts and frequently used commands required to advance readers from a novice to an intermediate level. Basic concepts discussed include: model creation, such as body and joint definitions; analysis type selection, such as static (assembly) analysis, kinematics and dynamics; and results visualization. The concepts are introduced using simple, yet realistic, examples. Verifying the results obtained from computer simulation is extremely important. One of the unique features of this textbook is the incorporation of theoretical

discussions for kinematic and dynamic analyses in conjunction with simulation results obtained using Mechanism Design. The theoretical discussions simply support the verification of simulation results rather than providing an in-depth discussion on the subjects of kinematics and dynamics.

The purpose of Pro/ENGINEER Advanced Tutorial is to introduce users to some of the more advanced features, commands, and functions in Pro/ENGINEER Wildfire 5.0. Each lesson concentrates on a few of the major topics and the text attempts to explain the "why's" of the commands in addition to a concise step-by-step description of new command sequences. This book is suitable for a second course in Pro/ENGINEER for users who understand the features covered in Roger Toogood's Pro/ENGINEER Tutorial. The style and approach of the previous tutorial have been maintained. The material covered in this tutorial represents an overview of what is felt to be commonly used and important functions. These include customization of the working environment, advanced feature creation (sweeps, round sets, draft and tweaks, UDF's, patterns and family tables), layers, Pro/PROGRAM, and advanced drawing and assembly functions. Pro/ENGINEER Advanced Tutorial consists of eight lessons. A continuing theme throughout the lessons is the creation of parts for a medium-sized modeling project. The project consists of a small three-wheeled utility cart. Project parts are given at the end of each lesson that utilize functions presented earlier in that lesson. Final assembly is performed in the last lesson.
