Scientific communication depends primarily on publishing in journals. The most important indicator to determine the influence of a journal is the Impact Factor. Since this factor only measures the average number of citations per article in a certain time window, it can be argued that it does not reflect the actual value of a periodical. This book defines five dimensions, which build a framework for a multidimensional method of journal evaluation. The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011.

Citation Tracking in Academic Libraries: An Overview presents results from the overarching need for researchers to get relevant advice for their scholarly pursuits. This is even more critical in the fast changing environment, where even those who are established scholars find the new scholarly publishing paradigm hectic, and amateurs get easily intimidated. In the wake of the competitive ranking of universities, there is an added requirement for faculty to be involved with research activities so they can enhance

the standing of their parent institutions. That means there is a need to use valid and authentic platforms for publishing. Making reference to already existing texts and answering questions that have been encountered by the author, the book is compiled to make easy, short, and concise reading that is an overview on the tracking of citations. Besides giving suggestions on how academic librarians can provide support to scholars, it includes the benefit of having librarians who are also scholars. Explains the role of the academic library in citation tracking matters Presents an explanation of what the academic librarian does in the scholarly publishing arena Articulates the role of a research agenda in giving direction to research activities Provides reasons to discuss the collaborative nature of library work and other offices of the university that support scholarly productivity

### **The Theory and Practice of Learning**

From a Pulitzer Prize-winning investigative reporter at The New York Times comes the troubling story of the rise of the processed food industry -- and how it used salt, sugar, and fat to addict us. Salt Sugar Fat is a journey into the highly secretive world of the processed food giants, and the story of how they have deployed these three essential ingredients, over the past five decades, to dominate the North American diet. This is an eye-opening book that demonstrates how the makers of these foods have chosen, time and again, to double down on their efforts to increase consumption and profits, gambling that consumers

and regulators would never figure them out. With meticulous original reporting, access to confidential files and memos, and numerous sources from deep inside the industry, it shows how these companies have pushed ahead, despite their own misgivings (never aired publicly). *Salt Sugar Fat* is the story of how we got here, and it will hold the food giants accountable for the social costs that keep climbing even as some of the industry's own say, "Enough already."

The translation was done by forty-seven Church of England scholars, the New Testament coming from the Greek Textus Receptus (Received Text), the Old

Testament from the Masoretic Hebrew text, and the Apocrypha from the Greek Septuagint (LXX), except for two Esdras from the Latin Vulgate.

This new edition of *Fungi in Ecosystem Processes* continues the unique approach of examining the roles of fungi from the perspective of ecosystem functions. It explores how fungi have adapted to survive within particular constraints, how they help to maintain homeostasis in ecosystems, how they facilitate

resistance to perturbations, and how they influence the communities of other organisms. Updated and revised, the second edition Expands the section on plant pathogens, invasive species, and insect-fungal interactions Provides more extensive coverage on insect-fungal interactions, including entomopathogens, the links between entomopathogens and endophytes, and symbiotic and mutualistic interactions Adds a new section on fungi in the built environment Presents new material on below-ground to above-ground interactions mediated through fungi, such as mycorrhizal signaling systems for herbivory defense The book also includes expanded coverage of the role of fungi in suppressive soils, aquatic and marine fungi, modern methods of following food chains in fungal-invertebrate trophic interactions, and the physiology of nutrient uptake by mycorrhizae. A necessary update and expansion to previous material, this book provides an essential reference on the current understanding of fungal roles in ecosystem processes. It also identifies directions for future study, including an emphasis on the need for further research on fungi in built environments.

### **MLA Handbook for Writers of Research Papers**

In response to the world's rapidly growing social, economic and environmental challenges, a growing wave of "social intrapreneurs" are harnessing the power of large companies to create new business solutions to address societal problems. Social Intrapreneurism and All That Jazz reveals how these

highly creative social innovators are improvizing alliances across, as well as beyond, their companies to create micro-insurance products for low-income peop≤ offer delivery services to millions of small businesses in slums around the world; develop alternative-energy solutions inside a major gas and oil corporation; partner with a Brazilian community to produce new natural care products; establish a green advertising network within a major media company; apply engineering expertise to help alleviate poverty and much more - all while generating commercial value for their companies. Distilling insights from interviews with social intrapreneurs, their colleagues and experts around the world, the authors bring to life how business can be about more than just maximizing profit. They identify the mind-sets, behaviours and skills that have helped successful social intrapreneurs journey from initial idea to roll-out by their company - and some of the pitfalls. Although their journeys may be lonely at times and require considerable hard work while working "against the grain" of large conventional businesses, successful social intrapreneurs are, above all, great communicators who inspire others to join them in achieving a higher purpose beyond the realms of conventional business. Drawing on the metaphors of ensemble jazz music-making, the authors describe how "woodshedding", "jamming", "paying your dues", being a "sideman", joining and building a "band" but, above all, "listening" to what is happening in business and the wider world - are all part of the life of a successful social intrapreneurism project. Whether you're an aspiring social intrapreneur who wants to change the world while keeping your day job, or want to renew

the entrepreneurial spirit of your own company, this book is for you.

Modern therapeutic strategies in the last decade have radically changed the approach to the oncologic patient with metastatic disease. Not infrequently today metastases are managed more aggressively and addressed in a multidisciplinary way with extremely encouraging results in terms of both survival and disease control. There have been equally revolutionary changes in diagnostic imaging, with renewed attention to early diagnosis of both local and distant recurrence, in order to prompt timely radical intervention. The distribution of metastases is affected by characteristics of the primary improved

survival of neoplastic patients and the routine imaging follow-up have resulted in greatly increased detection of metastatic malignancies with less than typical appearance and behaviour.

### **Citation Tracking in Academic Libraries**

Umberto Eco's wise and witty guide to researching and writing a thesis, published in English for the first time. By the time Umberto Eco published his best-selling novel *The Name of the Rose*, he was one of Italy's most celebrated intellectuals, a distinguished academic and the author of influential works on semiotics. Some years before that, in 1977, Eco published a little book for his students, *How to Write a Thesis*, in which he offered useful advice on all the steps involved in researching and writing a thesis—from choosing a topic to organizing a work schedule to writing the final draft. Now in its twenty-third edition in Italy and translated into seventeen languages, *How to Write a Thesis* has become a classic. Remarkably, this is its first, long overdue publication in English. Eco's approach is anything but dry and academic. He not only offers practical advice but also considers larger questions about the value of the thesis-writing exercise. *How to Write a Thesis* is unlike any other writing manual. It reads like a novel. It is opinionated. It is frequently irreverent, sometimes polemical, and often hilarious. Eco advises students how to avoid “thesis neurosis” and he answers the important question “Must You Read Books?” He reminds students “You are not Proust” and “Write everything that comes into your head, but

only in the first draft.” Of course, there was no Internet in 1977, but Eco's index card research system offers important lessons about critical thinking and information curating for students of today who may be burdened by Big Data. How to Write a Thesis belongs on the bookshelves of students, teachers, writers, and Eco fans everywhere. Already a classic, it would fit nicely between two other classics: Strunk and White and The Name of the Rose. Contents The Definition and Purpose of a Thesis • Choosing the Topic • Conducting Research • The Work Plan and the Index Cards • Writing the Thesis • The Final Draft

Most students struggle with learning how to find references, use them effectively, and cite them appropriately in a required format. One of the most common formats is that of APA. The authors all teach at the same university, where their current offtheshelf reference book, while helpful, is filled with a lot of extra information that they do not use and contains missing or incorrect information. The cost of this book also continues to rise. In a search for something else to meet their needs, they discovered that there are no concise guides that deal with APA only that are cost effective or userfriendly for students who are not familiar with using references and formatting an essay in the APA format. In order to offer student writers a source of information that is concise and costeffective, the authors have written this handbook

to provide students with important information in clear, concise, userfriendly language, as well as to offer practical examples that will help them grasp the concept of secondary research writing. Much of the published materials present the nitpicky details of APA in very technical terms that are not easy to understand. This handbook presents the same information in simplified terms with images and stepbystep instructions in ways that will make sense to both undergraduate and graduate student writers. Additionally, student writers often struggle with understanding the concept of plagiarism, as well as how to find sources, evaluate the appropriateness of sources, and use sources in effective ways (e.g., how to integrate quotes, when to paraphrase, among others). This book provides this information in a concise and easytounderstand format.

Why do we die? Do all living creatures share this fate? Is the body's slow degradation with the passage of time unavoidable, or can the secrets of longevity be unlocked? Over the past two decades, scientists studying the workings of genes and cells have uncovered some of the clues necessary to solve these mysteries. In this fascinating and accessible book, two neurobiologists share the often-surprising findings from that research, including the possibility that aging and natural death may not be forever a certainty for most living beings. André Klarsfeld and Frédéric Revah discuss in detail the latest scientific findings and views on death and longevity. They challenge many popular assumptions, such as the idea that the death of individual organisms serves to rejuvenate species or that death and sexual reproduction are

necessarily linked. Finally, they describe current experimental approaches to postpone natural death in lower organisms as well as in mammals. Are all organisms that survive until late in life condemned to a "natural" death, as a consequence of aging, even if they live in a well-protected, supportive environment? The variability of the adult life span—from a few hours for some insects to more than a millennium for the sequoia and thirteen times that for certain wild berry bushes—challenges the notion that death is unavoidable. Evolutionary theory helps explain why and how some species have achieved biological mechanisms that seemingly allow them to resist time. Death cannot be understood without looking into cells—the essential building blocks of life. Intriguingly, at the level of cells, death is not always an accident; it is often programmed as an indispensable aspect of life, which benefits the organism as a whole.
