Guide to Methods for Students of Political Science

In 2016, 90% of young Americans reported an interest in politics. 80% intended to vote. Yet only 43% of people between the ages of 18 and 29 ended up actually casting a ballot. Making Young Voters investigates what lies at the core of this gap. The authors' in-depth, interdisciplinary approach reveals that political apathy is not the reason for low levels of youth turnout. Rather, young people too often fail to follow through on their political interests and intentions. Those with 'noncognitive' skills related to self-regulation are more likely to overcome internal and external barriers to participation. This book combines theory from psychology, economics, child development, and more to explore possible solutions rooted in civic education and electoral reform. This potentially paradigm-shifting contribution to the literature of American politics serves to influence not only our understanding of voter turnout, but also the fundamental connections between the education

system, electoral institutions, and individual civic behavior in a democracy. How young people vote affects not only each individual future, but that of the United States, and of us all.

The Politics of Political Science

How do we know why the Soviet Union decided to place missiles in Cuba? How do we know why North Korea invaded South Korea? How do we know why the U.S. decided to invade Iraq? We know the answers to these questions because political science scholars did in-depth research and shared their findings.

Conducting, presenting, and publishing research are all integral parts of being a political scientist. Students in political science courses are exposed to the research done by scholars. In turn, professors would

like their students to become part of this community of scholars and will assign research papers so that students can demonstrate their knowledge of specific topics. An indispensable resource, *Research and Writing Guide for Political Science* provides a brief primer on the basic skills required for writing an effective research paper. It covers conducting research (finding, evaluating, and using sources); the various parts of a research paper and how they should be organized; writing, rewriting, revising, and editing; and citing the research (footnotes, endnotes, bibliographies, reference lists, and different academic citation styles: MLA, APA, and Chicago). A conclusion offers a list of additional resources.

The senior thesis is the capstone of a college education, but writing one can be a daunting prospect. Students need to choose their own topic and select the right adviser. Then they need to work steadily for several months as they research, write, and manage a major independent project. Now there's a mentor to help. *How to Write a BA Thesis* is a practical, friendly guide written by Charles Lipson,

an experienced professor who has guided hundreds of students through the thesis-writing process. This book offers step-by-step advice on how to turn a vague idea into a clearly defined proposal, then a draft paper, and, ultimately, a polished thesis. Lipson also tackles issues beyond the classroom—from good work habits to coping with personal problems that interfere with research and writing. Filled with examples and easy-to-use highlighted tips, the book also includes handy time schedules that show when to begin various tasks and how much time to spend on each. Convenient checklists remind students which steps need special attention, and a detailed appendix, filled with examples, shows how to use the three main citation systems in the humanities and social sciences: MLA, APA, and Chicago. *How to Write a BA Thesis* will help students work more comfortably and effectively—on their own and with their advisers. Its clear guidelines and sensible advice make it the perfect text for thesis workshops. Students and their advisers will refer again and again to this invaluable resource. From choosing a topic to preparing the final paper, *How to Write a BA Thesis* helps students turn a daunting prospect into a remarkable achievement.

George, Stanford University, and Andrew Bennett, Georgetown University "Van Evera has a keen awareness of the questions that arise in every phase of the political science research project—from initial conception to final presentation. Although others may not agree with all of his specific advice, all will appreciate his user-friendly introduction to what is sometimes seen as an abstract and difficult topic."—Timothy J. McKeown, University of North Carolina, Chapel Hill For the last few years, Stephen Van Evera has greeted new graduate students at MIT with a commonsense introduction to qualitative methods in the social sciences. His helpful hints, always warmly received, grew from a handful of memos to an underground classic primer. That primer has now evolved into a book of how-to information about graduate study, which is essential reading for graduate students and undergraduates in political science, sociology, anthropology, economics, and history—and for their advisers.

and analyzing quantitative as well as qualitative data are all tough-going without a great deal of guidance and encouragement. Writing a Research Paper in Political Science breaks down the research paper into its constituent parts and shows students what they need to do at each stage to successfully complete each component until the paper is finished. Practical summaries, recipes for success, worksheets, exercises, and a series of handy checklists make this a must-have supplement for any writing-intensive political science course. New to the Fourth Edition: A non-causal research paper woven throughout the text offers explicit advice to guide students through the research and writing process. Updated and more detailed discussions of plagiarism, paraphrases, "drop-ins," and "transcripts" help to prevent students from misusing sources in a constantly changing digital age. A more detailed discussion of "fake news" and disinformation shows students how to evaluate and choose high quality sources, as well as how to protect oneself from being fooled by bad sources. Additional guidance for writing abstracts and creating presentations helps students to understand the logic behind abstracts and prepares students for presentations in the classroom, at a conference, and beyond. A greater emphasis on the value of qualitative research provides students with additional instruction on how to do it.

Research Proposals

While heated arguments between practitioners of qualitative and quantitative research have begun to test the very integrity of the social sciences, Gary King, Robert Keohane, and Sidney Verba have produced a farsighted and timely book that promises to sharpen and strengthen a wide range of research performed in this field. These leading scholars, each representing diverse academic traditions, have developed a unified approach to valid descriptive and causal inference in qualitative research, where numerical measurement is either impossible or undesirable. Their book demonstrates that the same logic of inference underlies both good quantitative and good qualitative research designs, and their approach applies equally to each. Providing precepts intended to stimulate and discipline thought, the authors explore issues related to framing research questions, measuring the accuracy of data and uncertainty of empirical inferences, discovering causal effects, and generally improving qualitative research. Among the specific topics they address are interpretation and inference, comparative case

studies, constructing causal theories, dependent and explanatory variables, the limits of random selection, selection bias, and errors in measurement.

Mathematical notation is occasionally used to clarify concepts, but no prior knowledge of mathematics or statistics is assumed. The unified logic of inference that this book explicates will be enormously useful to qualitative researchers of all traditions and substantive fields.

Identity, Competition and Electoral Availability

Political scientists often ask themselves what might have been if history had unfolded differently: if Stalin had been ousted as General Party Secretary or if the United States had not dropped the bomb on Japan. Although scholars sometimes scoff at applying hypothetical reasoning to world politics, the contributors to this volume--including James Fearon, Richard Lebow, Margaret Levi, Bruce Russett, and Barry Weingast--find such counterfactual conjectures not only useful, but necessary for drawing causal inferences from historical data. Given the importance of counterfactuals, it is perhaps surprising that we lack standards for evaluating them. To fill this gap, Philip Tetlock and Aaron Belkin propose a set of criteria for distinguishing plausible from implausible counterfactual conjectures across a wide range of applications. The contributors to this volume make use of these and other criteria to evaluate counterfactuals that emerge in diverse methodological contexts including comparative case studies, game theory, and statistical analysis. Taken together, these essays go a long way toward establishing a more nuanced and rigorous framework for assessing counterfactual arguments about world politics in particular and about the social sciences more broadly.

will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site *The Professor is In*, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including:

- When, where, and what to publish
- Writing a foolproof grant application
- Cultivating references and crafting the perfect CV
- Acing the job talk and campus interview
- Avoiding the adjunct trap
- Making the leap to nonacademic work, when the time is right

The Professor is In addresses all of these issues, and many more.

'Getting your PhD will no doubt establish itself as a firm favourite' - ESCalate 'Packed with practical advice on all aspects of the PhD process, new and continuing research students should find this book of great help' - Professor Malcolm Tight, Lancaster University, UK How to get your Ph.D is an original study guide aimed at prospective and current postgraduate students, covering the process of accessing, undertaking and completing doctoral research in the social sciences and the humanities. The content is unique in incorporating discussion of the less recognised personal, emotional and organisational demands of independent study. Drawing on a variety of student experiences, the authors apply a case study approach to examine the dilemmas and complexities of postgraduate study. The book is organised into four parts covering the research process; writing, publishing and networking; shifting identities and institutions and relationships of support. Each chapter includes an easy to use format including real-life accounts, tips and strategies for problem solving and guidance for additional resources. The guide includes accessible advice and guidance across a spectrum of methodological, personal, emotional, practical and institutional issues.

Writing with Sources (2nd Edition)

The question of whether Western party systems were becoming more unstable and electorates more volatile had already become central to the study of

modern European by the end of the 1970s. Much of the literature at the time stressed how Western Europe was experiencing a phase of party breakdown, dealignment and decay, and how traditional mass politics was in the process of transformation. In this first book-length analysis of the subject, Stefano Bartolini and Peter Mair convincingly demonstrated how this emphasis on change had been largely misconceived and misplaced. This was the first systematic and conceptually sophisticated work to bring together the study of electoral change and cleavage persistence, and has since become one of the landmark volumes in the study of electoral politics in Europe. The authors examine patterns of electoral persistence and change in Western Europe between 1885 and 1985. They assess both what these patterns indicate with regard to the persistence of traditional cleavages, particularly the class cleavage, and how these patterns vary according to political, institutional and social factors. They analyse the various patterns of competition which have characterised elections across the different European countries and in different historical periods, and how cleavages can persist and re-emerge even in the face of widespread social change. They develop a sophisticated model of aggregate electoral change, in which national electorates are conceived as being torn between the stability brought about by cultural identities and organisational structures and the stimuli for change that are provoked by party competition and institutional change. *Identity, Competition and Electoral Availability* was awarded the Stein Rokkan Prize for Comparative Social Science Research and is now reprinted for the first time in paperback.

When President Eisenhower identified the "military-industrial complex" as a powerful component of political and economic life in the United States, he also warned against feeding it too much power. That balance continues to be a hot debate. Where will readers stand on using military spending to fuel economic growth or limiting that spending to leave room for social programs? Should we be bolstering geopolitical power with military strength or limiting military spending in order to combat wasteful budgets? From drones to the F-35 Joint Strike Fighter to cyberoperations, this reporting reveals the extent of military spending and the complex political problems associated with controlling it. Beyond the text, features to further challenge readers include media literacy terms and questions.

Expository Writing in Political Science

In this thought-provoking book, Paulo Ravecca presents a series of interlocking studies on the politics of political science in the Americas. Focusing mainly on the cases of Chile and Uruguay, Ravecca employs different strands of critical theory to challenge the mainstream narrative about the development of the discipline in the region, emphasizing its ideological aspects and demonstrating how the discipline itself has been shaped by power relations. Ravecca metaphorically charts the (non-linear) transit from "cold" to "warm" to "hot" intellectual temperatures to

illustrate his—alternative—narrative. Beginning with a detailed quantitative study of three regional academic journals, moving to the analysis of the role of subjectivity (and political trauma) in academia and its discourse in relation to the dictatorships in Chile and Uruguay, and arriving finally at an intimate meditation on the experience of being a queer scholar in the Latin American academy of the 21st century, Ravecca guides his readers through differing explorations, languages, and methods. *The Politics of Political Science: Re-Writing Latin American Experiences* offers an essential reflection on both the relationship between knowledges and politics and the political and ethical role of the scholar today, demonstrating how the study of the politics of knowledge deepens our understanding of the politics of our times.

How to Write a BA Thesis

This book sets forth a set of truly controversial and astonishing theories: First, it proposes that below the surface of the earth is a biosphere of greater mass and volume than the biosphere the total sum of living things on our planet's continents and in its oceans. Second, it proposes that the inhabitants of this subterranean biosphere are not plants or animals as we know them, but heat-loving bacteria that survive on a diet consisting solely of hydrocarbons that is, natural gas and petroleum. And third and perhaps most heretically, the book advances the stunning idea that most hydrocarbons on Earth are not the byproduct of biological debris ("fossil fuels"), but were

a common constituent of the materials from which the earth itself was formed some 4.5 billion years ago. The implications are astounding. The theory proposes answers to often-asked questions: Is the deep hot biosphere where life originated, and do Mars and other seemingly barren planets contain deep biospheres? Even more provocatively, is it possible that there is an enormous store of hydrocarbons upwelling from deep within the earth that can provide us with abundant supplies of gas and petroleum? However far-fetched these ideas seem, they are supported by a growing body of evidence, and by the indisputable stature and seriousness Gold brings to any scientific debate. In this book we see a brilliant and boldly original thinker, increasingly a rarity in modern science, as he develops potentially revolutionary ideas about how our world works.
