Mellor's Modern Inorganic Chemistry

This laboratory based text centres itself around decision-making activities, where students apply their chemistry knowledge to realistic situations. This fifth edition includes more photographs, new drawings and new design.

Chemistry

College Chemistry

The Science Teacher

A Text Book of Modern Inorganic Chemistry

Hands-On Chemistry Activities with Real-Life Applications

A Text-book of Inorganic Chemistry

The Phase Rule and Its Applications

This comprehensive collection of over 300 intriguing investigations-including demonstrations, labs, and other activities-- uses everyday examples to make chemistry concepts easy to understand. It is part of the two-volume PHYSICAL SCIENCE CURRICULUM LIBRARY, which consists of Hands-On Physics Activities With Real-Life Applications and Hands-On Chemistry Activities With Real-Life Applications.

Journal of the American Chemical Society

A weekly record of scientific progress.

Treatise on General and Industrial Inorganic Chemistry

General Chemistry

A Treatise on Chemistry

Proceedings of the Society are included in v. 1-59, 1879-1937.

Journal of the Chemical Society

This is a general chemistry book with a strong emphasis on descriptive chemistry which is found in many sections of the text, boxes, marginal notes and photographs. It covers problem-solving and offers a wide range of applications that are relevant to everyday life, and to other disciplines.

The Phase Rule

Journal of the American Chemical Society

Laboratory Manual of General Chemistry

Bentley's Textbook of Pharmaceutics - E-Book

Inorganic Chemistry

New Living Science CHEMISTRY for CLASS 9

Calculations for GCSE Chemistry

A Commentary on the Scientific Writings of J. Willard Gibbs, PH. D., LL. D., Formerly Professor of Mathematical Physics in Yale University

Journal of the Chemical Society

This series builds on the Nelson Science and Nelson Balanced Science series. It was developed for those studying for a Double or Triple Award at GCSE. It includes coverage of all the major GCSE science specifications, a range of case studies and

other materials to further develop ideas and evidence in science and a range of questions including actual examination questions.

Laboratory Studies in Chemistry

Second Year College Chemistry

This fully revised edition is in line with the revised 2002 National Curriculum requirements and focuses on quantitative chemistry in science. Written to match all major GCSE specifications the text covers all types of numerical questions from first principles. For each topic, a concise treatment of the underlying theory is followed by problems grouped into three sections of increasing difficulty. Calculations based on round number molar masses are included to enable students to concentrate on the chemical basis of the problems rather than arithmetical manipulation.

SCC Library has 1964-cur.

Chemistry

Journal - Chemical Society, London

This third edition of Key Science: Chemistry has been fully revised to meet the requirements of all 2001 GCSE specifications. It is aimed at middle-ability students, but contains enough material for high achievers. Topics are clearly differentiated between core material for GCSE science: Double-Award/Single-Award and extension material for GCSE science: chemistry.

Papers from the Geophysical Laboratory, Carnegie Institution of Washington

Science Abstracts

Chemistry in the Community

Covers the principles basic to a beginning course in chemistry, developed in considerable detail from an elementary point of view. Includes a large number of questions and problems (graded in difficulty with answers in appendixes after text at the end of each chapter as well as a large number of solved examples (about 200) - the solutions emphasize reasoning rather than which number goes where.

Introduction to Physical Chemistry

Chemistry

"Titles of chemical papers in British and foreign journals" included in Quarterly

journal, v. 1-12.

Solution and Electrolysis

Chemistry

This adaptation of Bentley's Textbook of Pharmaceutics follows the same goals as those of the previous edition, albeit in a new look. The content of the old edition has been updated and expanded and several new chapters, viz. Complexations, Stability Testing as per ICH Guidelines, Parenteral Formulations, New Drug Delivery Systems and Pilot Plant Manufacturing, have been included, with an intention to make the book more informative for the modern pharmacists. The book has six sections: Section I deals with the physicochemical principles. Two new chapters: Complexations and ICH Guidelines for Stability Testing, have been added to make it more informative. Section II conveys the information regarding pharmaceutical unit operations and processes. Section III describes the area of pharmaceutical practice. Extensive recent updates have been included in many chapters of this section. Two new chapters: Parenteral Formulations and New Drug Delivery Systems, have been added. Section IV contains radioactivity principles and applications. Section V deals with microbiology and animal products. Section VI

contains the formulation and packaging aspects of pharmaceuticals. Pilot Plant Manufacturing concepts are added as a new chapter, which may be beneficial to readers to understand the art of designing of a plant from the pilot plant model.
