A new, fully updated edition of Baliga's very popular collection of short cases arranged by clinical area, emphasizing the key diagnostic features of clinical conditions as commonly presented in the short-case part of the Final MB and MRCP examinations. Also included are likely instructions or commands expected from the examiner for each condition, and the key points which the candidate must tell the examiner. A must-have for the final-year undergraduate and trainee doctor. From customer reviews of the previous edition: 'This book is the most useful guide that money can buy for the final exams in the current MBChB undergraduate course. It covers important areas of clinical medicine in a question based format and highlights classical scenarios. The questions raised are classical of examiners in the long and short case examinations. This is a must buy for any undergraduate medical student!!!!' 'The book is a must during the period that the young doctor or student is on the wards. It allows one to focus on the important physical findings and the relevant clinical pearls associated with the different medical conditions

met It discusses important physical findings and their diagnostic importance. I have found it useful in preparing for attending ward rounds and also for sharpening my clinical skills. The discussion section is well organised such that undergraduates as well as postgraduates can benefit and the material is up to date with good references for further reading.' 'Excellent preparation for finals as well the MRCP MUST HAVE before MRCP PACES.' Features Ideal for use in the ward. Each of the 250 cases presents a disease or topic which is covered consistently to address: ● salient features ● history ● examination ● diagnosis ● questions covering investigations and differentiations ● advanced-level questions ● management. New to this edition: Over 350 new images Enhanced advanced-level questions Many more tables

Long Cases in Clinical Medicine

Ol' Rosie, a cranky, old mare, has escaped the corral and has led ten of the Nolan's other horses into the stark mountains of eastern Oregon. It's not the first time, but for Wart's pa, this is a particularly desperate situation. On their ranch -- as on any ranch in 1907 -- horses are the key to a rancher's livelihood. So when Ol' Rosie and the other horses run off, somebody has to go catch them. But Wart's ma is having a baby. His pa needs to stay with her and to watch his little brother Danny. That leaves twelve-year-old Wart with the dangerous and critical charge of rounding up their runaway horses by himself. Struggling through the rugged wilderness and

facing almost overwhelming peril, Wart must keep his wits about him. "I stood there for another minute trying to think. The wind had been knocked out of me but I was beginning to breathe better. I was miles from home. It was late afternoon -- soon to be dark. I was hurt. Gypsy was lame. Worst of all, I knew that the cougar was out there -- close to me. I was bleeding and he was hunting." With each successive threat, Wart becomes more determined to defy the frightening odds against him and prove his worth to his stern, critical pa. Wart is sent on a mission to save his family's ranch, and along the way he learns that despite his youth and insecurity, he possesses the knowledge and spirit to survive and eventually triumph.

Redeemed Reflections

Forget everything you ever knew about unicorns. The fluffy, sparkly, friendly "horses" so popular the world over don't exist. Real unicorns are killers. Beasts the size of elephants, with cloven hooves that shake the earth, hides impervious to bullets, and horns that contain a deadly poison, unicorns can outrun a sports car and smell a human from a mile away. And they can only be killed by virgin warriors

descended from Alexander the Great. Sixteen-year-old Astrid Llewelyn has grown up with her mom Lilith's tall tales about unicorns and their exalted family heritage, but figures her mom's crazy. But the scary stories her mom told her about the monsters in her formative years left her with a firm phobia about unicorns, even the cutesy kind popular with young girls. But when one of the monsters attacks her boyfriend in the woods—thereby ruining any chance of him taking her to prom—Astrid finds herself headed to Rome to train as a unicorn hunter. “As swift and sure-footed as a killer unicorn, Rampant weaves a vibrant new mythology from venerable threads.”—Scott Westerfeld, bestselling author of the Uglies series

The Dream Ender

This book examines the origins and dynamical characteristics of atmospheric inertia-gravity waves in the Antarctic mesosphere. Gravity waves are relatively small-scale atmospheric waves with a restoring force of buoyancy that can transport momentum upward from the troposphere to the middle atmosphere. In previous studies, the dynamical characteristics of mesospheric gravity waves have not been fully examined using numerical simulations, since performing a numerical simulation with a high resolution and a high model-top requires considerable

computational power. However, recent advances in computational capabilities have allowed us to perform numerical simulations using atmospheric general circulation models, which cover the troposphere to the mesosphere with a sufficiently fine horizontal resolution to resolve small-scale gravity waves. The book first describes the simulation of mesospheric gravity waves using a high-resolution non-hydrostatic atmospheric model with a high model top. The accuracy of the numerical results was confirmed by the first Mesosphere-Stratosphere-Troposphere/Incoherent Scattering (MST/IS) radar observation in the Antarctic. It also depicts the origins and propagation processes of mesospheric gravity waves on the basis of the results of the high-resolution numerical model. The behaviors of mesospheric gravity waves can be clearly explained using both fundamental and cutting-edge theories of fluid dynamics
