A high level of literacy in both print and digital media is required for negotiating most aspects of 21st-century life, including supporting a family, education, health, civic participation, and competitiveness in the global economy. Yet, more than 90 million U.S. adults lack adequate literacy. Furthermore, only 38 percent of U.S. 12th graders are at or above proficient in reading. Improving Adult Literacy Instruction synthesizes the research on literacy and learning to improve literacy instruction in the United States and to recommend a more systemic approach to research, practice, and policy. The book focuses on individuals ages 16 and older who are not in K-12 education. It identifies factors that affect literacy development in adolescence and adulthood in general, and examines their implications for strengthening literacy instruction for this population. It also discusses technologies for learning that can assist with multiple aspects of teaching, assessment,and accommodations for learning. There is inadequate knowledge about effective instructional practices and a need for better assessment and ongoing monitoring of adult students' proficiencies, weaknesses, instructional environments, and progress, which might guide instructional planning. Improving Adult Literacy Instruction recommends a program of research and innovation to validate, identify the boundaries of, and extend current knowledge to improve instruction for adults and adolescents outside school. The book is a valuable resource for curriculum developers, federal agencies such as the Department of Education, administrators, educators, and funding agencies.

This book constitutes the first thorough academic analysis of legislative drafting. By placing the study of legislation and its principles within the paradigm of Flyvberg's phronetic social sciences, it offers a novel approach which breaks the tradition of unimaginative past descriptive reiterations of drafting conventions. Instead of prescribing rules for legislation, it sets out to identify efficacy as the main aim of the actors in the policy, legislative and drafting processes, and effectiveness as the main goal in the drafting of legislation. Through the prism of effectiveness as synonymous with legislative quality, the book explores the stages of the drafting process; guides the reader through structure and sections in their logical sequence, and introduces rules for drafting preliminary, substantive and final provisions. Special provisions, comparative legislative drafting and training for drafters complete this thorough analysis of the drafting of legislation as a tool for regulation. Instead of teaching the reader which drafting rules prevail, the book explores the reasons why drafting rules have come

about, thus encouraging readers to understand what goal is served by each rule and how each rule applies. The book is aimed at academics and practitioners who draft or use statutory law in the common or civil law traditions.
