Subject Analysis in Online Catalogs

APWeb and WAIM are two leading international conferences on the research, development, and applications of Web technologies, database systems, information management and software engineering, with a focus on the Asia-Pacific region. The previous APWeb conferences were held in Beijing (1998), Hong Kong (1999), Xi'an (2000), Changsha (2001), Xi'an (2003), Hangzhou (2004), Shanghai (2005), Harbin (2006), Huangshan (2007), and Shenyang (2008); and the previous WAIM conferences were held in Shanghai (2000), Xi'an (2001), Beijing (2002), Chengdu (2003), Dalian (2004), Hangzhou (2005), Hong Kong (2006), Huangshan (2007), and Zhangjiajie (2008). For the second time, APWeb and WAIM were combined to foster closer collaboration and research idea sharing, and were held immediately after IEEE ICDE 2009 in Shanghai. This high-quality program would not have been possible without the authors who chose APWeb+WAIM as a venue for their publications. Out of 189 submitted papers from 21 countries and regions, including Australia, Austria, Bengal, Brazil, Canada, France, Greece, Hong Kong, India, Iran, Japan, Korea, Macau, Mainland China, Myanmar, The Netherlands, Norway, Taiwan, Thailand, UK, and USA, we selected 42 full papers and 26 short papers for publication. The acceptance rate for regular full papers is 22%. The contributed papers addressed a wide scope of issues in the fields of Web-age information management and advanced applications, including Web data mining, knowledge discovery from streaming data, query

processing, multidimensional data analysis, data management support to advanced applications, etc.

PRICAI '96: Topics in Artificial Intelligence

This volume contains translations of papers that originally appeared in the Japanese journal Sugaku. The papers range over a variety of topics, including operator algebras, analysis, and statistics. This volume is suitable for graduate students and research mathematicians interested in analysis and its applications.

Fracture Mechanics

This volume constitutes the refereed proceedings of the 4th Pacific Rim International Conference on Artificial Intelligence, PRICAI '96, held in Cairns, Queensland, Australia in August 1996. The 56 revised full papers included in the book were carefully selected for presentation at the conference from a total of 175 submissions. The topics covered are machine learning, interactive systems, knowledge representation, reasoning about change, neural nets and uncertainty, natural language, constraint satisfaction and optimization, qualitative reasoning, automated deduction, nonmonotonic reasoning, intelligent agents, planning, and pattern recognition.

Neural Information Processing

Selected Papers on Analysis and Related Topics

This book constitutes the refereed proceedings of the 29th annual European Conference on Information Retrieval Research, ECIR 2007, held in Rome, Italy in April 2007. The papers are organized in topical sections on theory and design, efficiency, peer-to-peer networks, result merging, queries, relevance feedback, evaluation, classification and clustering, filtering, topic identification, expert finding, XML IR, Web IR, and multimedia IR.

Proceedings of the 2013 Joint Workshop of Fraunhofer IOSB and Institute for Anthropomatics, Vision and Fusion Laboratory

Step by Step College Writing

Paragraph Development helps students edit their own writing for clarity and accuracy and offers a three-phase strategy for building writing skills through planning, writing, and revising. The approach in each chapter is direct and functional: a model is provided and graphically explained, then students use the model to write their own paragraphs.-- Offers controlled information-transfer exercises, a choice of writing topics, and peer consultation and writing-evaluation methods.

Proceedings of the Ninth International Conference on Soft Computing and Pattern Recognition (SoCPaR 2017)

This book presents the refereed proceedings of the 4th Congress of the Italian Association for Artificial Intelligence, AI*IA '95, held in Florence, Italy, in October 1995. The 31 revised full papers and the 12 short presentations contained in the volume were selected from a total of 101 submissions on the basis of a careful reviewing process. The papers are organized in sections on natural language processing, fuzzy systems, machine learning, knowledge representation, automated reasoning, cognitive models, robotics and planning, connectionist models, model-based reasoning, and distributed artificial intelligence.

The Sundance Reader

The Pedestrian

"This book identifies solutions and suggestions for the design and development of adaptive applications and systems that provides more usable and qualitative content and services adjusted to the needs and requirements of the various users"--Provided by publisher.

Here is New York

In the summer of 1948, E.B. White sat in a New York City hotel room and, sweltering in the heat, wrote a remarkable pristine essay, Here is New York. Perceptive, funny, and nostalgic, the author's stroll around Manhattan—with the reader arm-in-arm—remains the quintessential love letter to the city, written by one of America's foremost literary figures. Here is New York has been chosen by The New York Times as one of the ten best books ever written about the city. The New Yorker calls it "the wittiest essay, and one of the most perceptive, ever done on the city."

Journal on Data Semantics VIII

Housed on the campus of the University of Michigan in Ann Arbor, the University Musical Society is one of the oldest performing arts presenters in the country. A past recipient of the National Medal of Arts, the nation's highest public artistic honor, UMS connects audiences with wide-ranging performances in music, dance, and theater each season. Between 1987 and 2017, UMS was led by Ken Fischer, who over three decades pursued an ambitious campaign to expand and diversify the organization's programming and audiences—initiatives inspired by Fischer's overarching philosophy toward promoting the arts, "Everybody In, Nobody Out." The approach not only deepened UMS's engagement with the university and southeast Michigan communities, it led to exemplary partnerships with distinguished artists across the world. Under Fischer's leadership, UMS hosted numerous breakthrough performances, including the Vienna Philharmonic's final tour with Leonard Bernstein, appearances by then relatively unknown opera singer Cecilia Bartoli, a multiyear partnership with the Royal Shakespeare Company, and artists as diverse as Yo-Yo Ma, Jawole Willa Jo Zollar, Elizabeth Streb, and Nusrat Fateh Ali Khan. Though peppered with colorful anecdotes of how these successes came to be, this book is neither a history of UMS nor a memoir of Fischer's significant accomplishments with the organization. Rather it is a reflection on the power of the performing arts to engage and enrich communities—not by handing down cultural enrichment from on high, but by meeting communities where they live and helping them preserve cultural heritage, incubate talent, and find ways to make community voices heard.

Paper (b), Cataloguing and classification

This modes-based reader/rhetoric/handbook offers students a comprehensive and student friendly approach to the writing process that emphasizes critical thinking as the key to successful college writing.

Ideas for the Future of the International Monetary System

This book constitutes the refereed proceedings of the 17th International Conference on Text, Speech and Dialogue, TSD 2013, held in Brno, Czech Republic, in September 2014. The 70 papers presented together with 3 invited papers were carefully reviewed and selected from 143 submissions. They focus on topics such as corpora and language resources; speech recognition; tagging, classification and parsing of text and speech; speech and spoken language generation; semantic processing of text and speech; integrating applications of text and speech processing; automatic dialogue systems; as well as multimodal techniques and modelling.

Encyclopedia of Rhetoric and Composition

The wealth of information accessible on the Internet has grown exponentially since its advent. This mass of content must be

systemically sifted to glean pertinent data, and the utilization of the collective intelligence of other users, or social information retrieval, is an innovative, emerging technique. *Social Information Retrieval Systems: Emerging Technologies & Applications for Searching the Web Effectively* provides relevant content in the areas of information retrieval systems, services, and research; covering topics such as social tagging, collaborative querying, social network analysis, subjective relevance judgments, and collaborative filtering. Answering the increasing demand for authoritative resources on Internet technologies, this Premier Reference Source will make an indispensable addition to any library collection.

21st Century Economics: A Reference Handbook

Now in a vibrant four-color format, *THE SUNDANCE READER*, Seventh Edition, features more than 70 concise yet distinct essays drawn from a range of academic disciplines and professions to appeal to students with diverse backgrounds and interests. Combining classic and contemporary, traditional and provocative, this rich collection of engaging essays and articles emphasizes critical thinking, careful analysis, and effective writing to help students master essential composition skills that will serve them well throughout their academic and professional careers. Topics are as varied as the environment, culture, social issues, the media, and business. Almost half of the selections are new, including works by William Safire, Jessica Valenti, Robert Reich and Al Gore. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Text, Speech and Dialogue

Interest in economics is at an all-time high. Among the challenges facing the nation is an economy with rapidly rising unemployment, failures of major businesses and industries, and continued dependence on oil with its wildly fluctuating price. Americans are debating the proper role of the government in company bailouts, the effectiveness of tax cuts versus increased government spending to stimulate the economy, and potential effects of deflation. Economists have dealt with such questions for generations, but they have taken on new meaning and significance. Tackling these questions and encompassing analysis of traditional economic theory and topics as well as those that economists have only more recently addressed, *21st Century Economics: A Reference Handbook* is intended to meet the needs of several types of readers. Undergraduate students preparing for exams will find summaries of theory and models in key areas of micro and macroeconomics. Readers interested in learning about economic analysis of an issue as well students embarking on research projects will find introductions to relevant theory and empirical evidence. And economists seeking to learn about extensions of analysis into new areas or about new approaches will benefit from chapters that introduce cutting-edge topics. To make the book accessible to undergraduate students, models have been presented only in graphical format (minimal calculus) and empirical evidence has been summarized in ways that do not require much background in statistics

or econometrics. It is thereby hoped that chapters will provide both crucial information and inspiration in a non-threatening, highly readable format.

Classification and Knowledge Organization

Easy Checklists for Essays

The LNCS Journal on Data Semantics is devoted to the presentation of notable work that, in one way or another, addresses research and development on issues related to data semantics. The scope of the journal ranges from theories supporting the formal definition of semantic content to innovative domain-specific applications of semantic knowledge.

Topics in Statistical Dependence

Handbook on Ontologies

Being a great teacher is more than lesson plans and seating charts. In this revised and expanded new edition of the classic bestseller, you learn what it takes to be the very best educator you can be, starting from day one in your new classroom! Filled with real-world life lessons from experienced teachers as well as practical tips and techniques, you'll gain the skill and confidence you need to create a successful learning environment for you and your students, including how to: Organize a classroom Create engaging lesson plans Set ground rules and use proper behavior management Deal with prejudice, controversy, and violence Work with colleagues and navigate the chain of command Incorporate mandatory test preparation within the curriculum Implement the latest educational theories In this book, veteran teacher Melissa Kelly provides you with the confidence you'll need to step into class and teach right from the start.

Reasoning and Writing Well

About three years ago, an idea was discussed among some colleagues in the Division of Statistics at the University of California, Davis, as to the possibility of holding an international conference, focusing exclusively on nonparametric curve estimation. The fruition of this idea came about with the enthusiastic support of this project by Luc Devroye of McGill University, Canada, and Peter Robinson of the London School of Economics, UK. The response of colleagues, contacted to ascertain interest in participation in such a conference, was gratifying and made the effort involved worthwhile. Devroye

and Robinson, together with this editor and George Metakides of the University of Patras, Greece and of the European Economic Communities, Brussels, formed the International Organizing Committee for a two week long Advanced Study Institute (ASI) sponsored by the Scientific Affairs Division of the North Atlantic Treaty Organization (NATO). The ASI was held on the Greek Island of Spetses between July 29 and August 10, 1990. Nonparametric functional estimation is a central topic in statistics, with applications in numerous substantive fields in mathematics, natural and social sciences, engineering and medicine. While there has been interest in nonparametric functional estimation for many years, this has grown of late, owing to increasing availability of large data sets and the ability to process them by means of improved computing facilities, along with the ability to display the results by means of sophisticated graphical procedures.

Reasoning and Writing Well with Student Access to Catalyst

Much of the data available today is unstructured and text-heavy, making it challenging for analysts to apply their usual data wrangling and visualization tools. With this practical book, you'll explore text-mining techniques with tidytext, a package that authors Julia Silge and David Robinson developed using the tidy principles behind R packages like ggraph and dplyr. You'll learn how tidytext and other tidy tools in R can make text analysis easier and more effective. The authors demonstrate how treating text as data frames enables you to manipulate, summarize, and visualize characteristics of text. You'll also learn how to integrate natural language processing (NLP) into effective workflows. Practical code examples and data explorations will help you generate real insights from literature, news, and social media. Learn how to apply the tidy text format to NLP Use sentiment analysis to mine the emotional content of text Identify a document's most important terms with frequency measurements Explore relationships and connections between words with the ggraph and widyr packages Convert back and forth between R's tidy and non-tidy text formats Use topic modeling to classify document collections into natural groups Examine case studies that compare Twitter archives, dig into NASA metadata, and analyze thousands of Usenet messages

New Directions in Technical Services

Everybody In, Nobody Out

Advances in Information Retrieval

First Published in 1996. Routledge is an imprint of Taylor & Francis, an informa company.

Advances in Data and Web Management

As the first volume in a new annual survey, Applied and Computational Control, Signals, and Circuits is an interdisciplinary publication which provides surveys, expository papers, algorithms, and software reviews. These volumes address significant new developments, applications, and computational methods in control, signal processing, circuit design and analysis. The goal is to provide authoritative and accessible accounts of the rapid development in computational engineering methods, applications, and algorithms. Each volume contains surveys and chapters representing a balance of coverage from the major areas of control, signals, and circuits. The contributions, selected by an editorial board comprised of leading researchers, contain all necessary background information and are extensive presentations of the topics. Topics and Features: Control, filtering, and systems identification Signal and image processing Circuit simulation Linear-control-systems software library, SLICOT Array algorithms Researchers, practitioners, and professionals in computer science, scientific computing, and engineering will find the volume essential for keeping abreast of the latest developments and for critically assessing new software tools. Table of Contents Chapter 1 Discrete Event Systems: The State of the Art and New Directions 1.1 Introduction 1.2 ES Modeling Framework 1.3 Review of the State of the Art in DES Theory 1.4 New Directions in DES Theory 1.5 Decentralized Control and Optimization 1.6 Failure Diagnosis 1.7 Nondeterministic Supervisory Control 1.8 Hybrid Systems and Optimal Control Chapter 2 Array Algorithms for H₂ and H-Infinity Estimation 2.1 Introduction 2.2 H₂ Square-Root Array Algorithms 2.3 H-Infinity Square-Root Array Algorithms 2.4 H₂ Fast Array Algorithms 2.5 H-Infinity Fast Array Algorithms 2.6 Conclusion 2.A Unitary and Hyperbolic Rotations 2.B Krein Spaces Chapter 3 Non-uniqueness, Uncertainty and Complexity in Modeling 3.1 Introduction 3.2 Issues of Models and Modeling 3.3 Non-Uniqueness 3.4 Uncertainty 3.5 Complexity 3.6 Formulation of Model Set Identification 3.7 Learning or Optimization? 3.8 Conclusion Chapter 4 Iterative Learning Control - An Expository Overview 4.1 Introduction 4.2 Generic Description of ILC 4.3 Two Illustrative Examples of ILC Algorithms 4.4 The Literature, Context, Terminology of ILC 4.5 ILC Algorithms and Results 4.6 Example: Combining Some New ILC Approaches 4.7 Conclusion: The Past, Present, and Future of ILC Chapter 5 FIR Filter Design via Spectral Factorization and Convex Optimization 5.1 Introduction 5.2 Spectral factorization 5.3 Convex semi-infinite optimization 5.4 Lowpass filter design 5.5 Log-Chebyshev approximation 5.6 Magnitude equalizer design 5.7 Linear antenna array weight design 5.8 Conclusions 5.A Appendix Chapter 6 Algorithms for Subspace State Space System Identification - An Overview 6.1 System identification: To measure is to know! 6.2 Linear subspace identification: an overview 6.3 Comparing PEM with subspace methods 6.4 Statistical consistency results 6.5 Extensions Chapter 7 Iterative Solution Methods for Large Linear Discrete Illposed Problems 7.1 Introduction 7.2 Krylov subspace iterative methods 7.3 Tikhonov regularization 7.4 An exponential filter function 7.5 Iterative methods based on implicitly defined filter functions 7.6 Towards a black box 7.7 Computed examples Chapter 8 Wavelet-Based Image Coding: An Overview 8.1 Introduction 8.2 Quantization 8.3 Transform Coding 8.4 Wavelets: A Different Perspective 8.5 A Basic Wavelet Image Coder 8.6 Extending the Transform Coder Paradigm 8.7 Zerotree Coding 8.8 Frequency, space-frequency adaptive coders 8.9 Utilizing Intra-band Dependencies

Intelligent User Interfaces: Adaptation and Personalization Systems and Technologies

An ontology is a formal description of concepts and relationships that can exist for a community of human and/or machine agents. The notion of ontologies is crucial for the purpose of enabling knowledge sharing and reuse. The Handbook on Ontologies provides a comprehensive overview of the current status and future perspectives of the field of ontologies considering ontology languages, ontology engineering methods, example ontologies, infrastructures and technologies for ontologies, and how to bring this all into ontology-based infrastructures and applications that are among the best of their kind. The field of ontologies has tremendously developed and grown in the five years since the first edition of the "Handbook on Ontologies". Therefore, its revision includes 21 completely new chapters as well as a major re-working of 15 chapters transferred to this second edition.

Nonparametric Functional Estimation and Related Topics

Approximately two years ago, the Guido Carli Association charged a group of distinguished economists with studying various aspects of the international monetary system and proposing ways to improve it. The studies were presented at a conference in Florence, Italy, on June 19, 1998 and their edited versions are published in this volume. Ideas for the Future of the International Monetary System consists of two parts: Part I contains the studies commissioned by the Carli Association - those by Dominick Salvatore; Koichi Hamada; Forrest Capie; Michele Fratianni, Andreas Hauskrecht and Aurelio Maccario; Jürgen von Hagen and Ingo Fender, Michael Artis, Marion Kohler and Jacques Mélitz; Barry Eichengreen; Michele Fratianni and Andreas Hauskrecht; Paolo Savona and Aurelio Maccario; and Elvio Dal Bosco - and the comments by Paul De Grauwe and William Branson, and the editors' conclusions. Part II contains three papers presented at the Florence conference, by Antonio Fazio, Carl Scognamiglio, and Alberto Predieri.

Topics in Number Theory

The three volume set LNCS 8226, LNCS 8227 and LNCS 8228 constitutes the proceedings of the 20th International Conference on Neural Information Processing, ICONIP 2013, held in Daegu, Korea, in November 2013. The 180 full and 75 poster papers presented together with 4 extended abstracts were carefully reviewed and selected from numerous submissions. These papers cover all major topics of theoretical research, empirical study and applications of neural information processing research. The specific topics covered are as follows: cognitive science and artificial intelligence; learning theory, algorithms and architectures; computational neuroscience and brain imaging; vision, speech and signal processing; control, robotics and hardware technologies and novel approaches and applications.

Social Information Retrieval Systems: Emerging Technologies and Applications for Searching the Web Effectively

This volume is dedicated to the memory of the Russian mathematician D. A. Gudkov. It contains papers written by his friends, students, and collaborators and is devoted mainly to the areas where Gudkov made important contributions. Several papers include new results on the topology of real plane algebraic curves (the Hilbert 16th problem).

Paragraph Development

Decision Making and Soft Computing

FLINS, originally an acronym for Fuzzy Logic and Intelligent Technologies in Nuclear Science, is now extended to Computational Intelligence for applied research. The contributions to the 11th of FLINS conference cover state-of-the-art research, development, and technology for computational intelligence systems, both from the foundations and the applications points-of-view. Contents: Invited Lectures: The Contribution of Fuzzy Sets to Decision Sciences (D Dubois) Granular Fuzzy Systems: A New Direction in Soft Computing and Human Centric Decision-Making (Witold Pedrycz) Some Approaches Towards Lattice Computing in Mathematical Morphology and Computational Intelligence (Peter Sussner) Decision Making and Decision Support Systems Statistics, Data Analysis and Data Mining Foundations of Computational Intelligence Soft Computing and Applied Research Intelligent Systems and Knowledge Engineering Uncertainty Modeling Intelligent Information Processing Readership: Graduate students, researchers, and academics in artificial intelligence/machine learning, information management, decision sciences, databases/information sciences and fuzzy logic. Keywords: FLINS 2014; Soft Computing; Knowledge Engineering; Decision Making

Text Mining with R

Challenges and Controversies in Management Research explores the history and cultural context, current issues and controversies and potential development of research in the field of management. The collection of essays is written by scholars of international standing, and the chapters address the development of management research in one or another continent, the need for global collaboration, the current state of management research and the development of the business school setting in which that research takes place. Factors affecting management research are explored in detail, giving consideration to the relationship between teaching, ethical conduct, publication, quality audits, collegiality and research. Contributions in the book also explore the development and usefulness of theories in management research and consider the relevance of management research and its applicability for management practice, policy-makers and the voluntary sector. A final section of contributions explores the future challenges for management research including the realization of reflexivity, the enduring gender bias of the management field, the future of theory, the patterns of development of new areas of management research and the need to manage large databases.

Economic Perspectives

This book presents 18 carefully selected papers from the ninth edition of the International Conference on Soft Computing and Pattern Recognition (SoCPaR 2017), which was held in Marrakesh, Morocco from December 11 to 13, 2017. A premier conference in the Soft Computing field, SoCPaR brings together the world's leading researchers and practitioners interested in advancing the state of the art in Soft Computing and Pattern Recognition, allowing them to exchange notes on a broad range of disciplines. The book offers a valuable reference guide for all researchers, students and practitioners in the fields of Computer Science and Engineering.

Topology of Real Algebraic Varieties and Related Topics

Peet Strydom celebrated his 75th birthday on 20 January 2012. Within the spirit of the Ruitersbosch Conferences over the past 14 years, the editors suggested a book to commemorate this event and to celebrate the stimulating and fruitful discussions we had in the past. The invitation to all participants was that they should write a chapter on their particular field of interest. The end result is this book with a wide range of very interesting national and international economic perspectives, all in honour of Peet Strydom.

Topics in Artificial Intelligence

This volume presents 71 articles dealing with models and methods of data analysis and classification, statistics and stochastics, information systems and text analysis as well as manifold applications. These articles are selected from about 160 papers presented at the 20th Annual Conference of the Gesellschaft für Klassifikation. This conference was organized by R. Klar, at the Abteilung für Medizinische Informatik of the University of Freiburg from March 6 to 8, 1996. Based on the submitted and revised papers eight sections have been arranged, where the number of papers in the sections is given in parentheses: 1. Data Analysis and Classification (10) 2. Neural Networks and Pattern Recognition (4) 3. Statistical Models and Methods (11) 4. Information Systems: Design and Implementation (7) 5. Text Analysis and Information Retrieval (10) 6. Applications in Medicine (15) 7. Applications in Economics and Social Sciences (7) 8. Applications in Archaeology, Biology, Linguistics and Dialectometry (7) This grouping doesn't separate strictly, but it shows how theoretical aspects, applications and interdisciplinarity are interrelated in many respects. For convenience of the reader the contents of this volume is briefly summarized. 1. Data Analysis and Classification This section presents ten articles dealing with different problems of data analysis and classification, especially with several aspects of multidimensional scaling (MDS), three-way data analysis, stochastic aspects in clustering and regression of ordinal data. The survey article of M. W. Trosset considers an approach to define and classify MDS problems as optimization problems.

The Everything New Teacher Book

This volume contains the proceedings of the Topics in Number Theory Conference held at the Pennsylvania State University from July 31 through August 3, 1997. It contains seventeen research papers covering many areas of number theory; among them are contributions from four of the eight plenary speakers

Applied and Computational Control, Signals, and Circuits

Find out what's new and what's hot in your field with this invaluable guide to the most important, current technical services issues and resources. This easy-to-use source guides you to valuable, recent information essential for success.

Challenges and Controversies in Management Research

A detailed analysis of the complex process of providing subject access in online catalogues. The text examines the interaction of the several necessary components, such as the catalogue database, users, hardware and software, and search and retrieval software.
