Information, Opportunism and Economic Coordination

"The" Illustrated London News

An integrated collection of a dozen of Peter Earl's lively and thought-provoking essays, carefully edited and updated. Theoretical topics include the prediction of corporate behaviour, the economic foundations of marketing and shopping mall design, pricing strategy and its relationship with the existence of second-hand markets, and the microfoundations of macroeconomics. Case studies include co-operation in the car industry, managerialist reforms in New Zealand and the university sector, structural change in the advertising industry and the place of GB Richardson and GLS Shackle in the literature of economics.

Cross Channel Attack

Porsche 924, 1976-1982

From pirates singing Ricky Martin to mob hits carried out with samurai swords, Bertil Lintner offers a fascinating look at organized crime in the Asia Pacific. Both Western and Asian pundits assert that shady deals are an Asian way of life. Some argue that corruption and illicit business ventures - gambling, prostitution, drug trafficking, gun running, oil smuggling - are entrenched parts of the Asian value system. Yet many Asian leaders maintain that their cities are safer than Sydney, Amsterdam, New York, and Los Angeles. Making use of expertise gained from twenty years of living in Asia, Lintner exposes the role crime plays in the countries of the Far East. In *Blood Brothers*, he takes you inside the criminal fraternities of Asia, examining these networks and their past histories in order to answer one question: How are civil societies all over the world to be protected from the worst excesses of increasingly globalised mobsters?

How to Rebuild GM LS-Series Engines

The Northwest Coast

Based on the popular Artech House classic, *Digital Communication Systems Engineering with Software-Defined Radio*, this book provides a practical approach to quickly learning the software-defined radio (SDR) concepts needed for work in the field. This up-to-date volume guides readers on how to quickly prototype wireless designs using SDR for real-world testing and experimentation. This book explores advanced wireless communication techniques such as OFDM, LTE, WLA, and hardware targeting. Readers will gain an understanding of the core concepts behind wireless hardware, such as the radio frequency front-end, analog-to-digital and digital-to-analog converters, as well as various processing technologies. Moreover, this volume includes chapters on timing estimation, matched filtering, frame synchronization message decoding, and source coding. The orthogonal frequency division multiplexing is explained and details about HDL code generation and deployment are provided. The book concludes with coverage of the WLAN toolbox with OFDM beacon reception and the LTE toolbox with downlink reception. Multiple case studies are provided throughout the book. Both MATLAB and Simulink source code are included to assist readers with their projects in the field.
