World History

Originally published in 1988. Bringing the world close to universal literacy will be a major legacy of the twentieth century. But the rapid and widespread developments in education that have enabled this to happen have not taken place in a social and political vacuum. In some instances conditions conducive to mass literacy have only come about through popular revolution or rapid economic development, but a less spectacular and frequently less tangible role has been played by a number of international agencies. The most prominent of these is Unesco, which has had the goal of global literacy at the heart of its endeavours ever since its foundation in 1946. Agreement on the best means of achieving this goal, however, has been very difficult to come by, and Unesco's literacy program has been shaped by internal and external politics as well as by local exigencies. This book outlines how Unesco's literacy program has evolved, and by discussing how idealistic aims and intentions have been given shape and direction by more immediate political and bureaucratic concerns provides a critique, in miniature, of the post-war history of the United Nations and related organisations.

The deployment of a large number of soldiers, police officers and civilian personnel inevitably has various effects on the host society and economy, not all of which are in keeping with the peacekeeping mandate and intent or are easily discernible prior to the intervention. This book is one of the first attempts to improve our understanding of unintended consequences of peacekeeping operations, by bringing together field experiences and academic analysis. The aim of the book is not to discredit peace operations but rather to improve the way in which such operations are planned and managed.

A History of Philosophy

In telling the history of our world, this book pays special attention to eight significant and recurring themes. These themes are presented to show that from America, to Africa, to Asia, people are more alike than they realize. Throughout history humans have confronted similar obstacles, have struggled to achieve similar goals, and continually have strived to better themselves and the world around them. The eight themes in this book are: power and authority, religious and ethical systems, revolution, interaction with environment, economics, cultural interaction, empire building, science and technology. - p. xxx-[xxx].

Right Your Software and Transform Your Career Righting Software presents the proven, structured, and highly engineered approach to software design that renowned architect Juval Löwy has practiced and taught around the world. Although companies of every kind have successfully implemented his original design ideas across hundreds of systems, these insights have never before appeared in print. Based on first principles in software engineering and a comprehensive set of matching tools and techniques, Löwy's methodology integrates system design and project design. First, he describes the primary area where many software architects fail and shows how to decompose a system into smaller building blocks or services, based on volatility. Next, he shows how to flow an effective project design from the system design; how to accurately calculate the project duration, cost, and risk; and how to devise multiple execution options. The method and

principles in Righting Software apply regardless of your project and company size, technology, platform, or industry. Löwy starts the reader on a journey that addresses the critical challenges of software development today by righting software systems and projects as well as careers—and possibly the software industry as a whole. Software professionals, architects, project leads, or managers at any stage of their career will benefit greatly from this book, which provides guidance and knowledge that would otherwise take decades and many projects to acquire. World History For Dummies

A brilliant satire of mass culture and the numbing effects of technology, *White Noise* tells the story of Jack Gladney, a teacher of Hitler studies at a liberal arts college in Middle America. Jack and his fourth wife, Babette, bound by their love, fear of death, and four ultramodern offspring, navigate the rocky passages of family life to the background babble of brand-name consumerism. Then a lethal black chemical cloud, unleashed by an industrial accident, floats over their lives, an "airborne toxic event" that is a more urgent and visible version of the white noise engulfing the Gladneys—the radio transmissions, sirens, microwaves, and TV murmurings that constitute the music of American magic and dread.

"Spurious Correlations is the most fun you'll ever have with graphs."--Bustle Military intelligence analyst and Harvard Law student Tyler Vigen illustrates the golden rule that "correlation does not equal causation" through hilarious graphs inspired by his viral website. Is there a correlation between Nic Cage films and swimming pool accidents? What about beef consumption and people getting struck by lightning? Absolutely not. But that hasn't stopped millions of people from going to tylervigen.com and asking, "Wait, what?" Vigen has designed software that scours enormous data sets to find unlikely statistical correlations. He began pulling the funniest ones for his website and has since gained millions of views, hundreds of thousands of likes, and tons of media coverage. Subversive and clever, Spurious Correlations is geek humor at its finest, nailing our obsession with data and conspiracy theory.

Patterns of World History offers a distinct framework for understanding the global past through the study of origins, interactions, and adaptations. Authors Peter von Sivers, Charles A. Desnoyers, and George Stow--each specialists in their respective fields--examine the full range of human ingenuity over time and space in a comprehensive, even-handed, and critical fashion. The book helps students to see and understand patterns through: ORIGINS - INTERACTIONS - ADAPTATIONS. These key features show the O-I-A framework in action: * Seeing Patterns, a list of key questions at the beginning of each chapter, focuses students on the 3-5 over-arching patterns, which are revisited, considered, and synthesized at the end of the chapter in Thinking Through Patterns. * Each chapter includes a Patterns Up Close case study that brings into sharp relief the O-I-A pattern using a specific idea or thing that has developed in human history (and helped, in turn, develop human history), like the innovation of the Chinese writing system or religious syncretism in India. Each case study clearly shows how an innovation originated either in one geographical center or independently in several different centers. It demonstrates how, as people in the centers interacted with their neighbors, the neighbors adapted to--and in many cases were transformed by--the idea, object, or event. Adaptations include the entire spectrum of human responses, ranging from outright rejection to creative borrowing and, at times, forced acceptance. * Concept Maps at the end of each chapter use compelling graphical representations of ideas and information to help students remember and relate the big patterns of the chapter.

Metropolis 2000

Originally published in 1993, *Metropolis 2000* analyses 20th century metropolitan development and planning under the economic and environmental conditions of the world's regions. Attempts to achieve the physical integration of the city without economic equality have failed. The book advances the principle of 'integrated diversity' which emphasises linking neighbourhood planning with a broader vision of the planned metropolis and applies a political economy approach, and argues for a new form of pro-urban thinking. The book argues that the basis for a humane approach to city planning is viewing the metropolis as a beneficial accompaniment to national independence, equality and social progress.
