From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

More and more sailors and powerboaters are buying and relying on electronic and electric devices aboard their boats, but few are aware of proper installation procedures or how to safely troubleshoot these devices if they go on the blink.

This comprehensive manual shows you how to go places and do things you never thought possible in a small outboard motorboat. A well-designed ruggedly built 17-footer, for instance, can fish offshore, circumnavigate Lake Superior, and crisscross the continent on inland waterways or on a trailer pulled by the family car. Small outboards are among the most versatile boats ever developed and are far more able than you might expect. Covered here are all the popular types--and some exciting alternatives as well as methods that may change your entire boating outlook. Aided by contributions from other experts, veteran outboard skipper David R. Getchell, Sr., offers a wealth of useful facts and special savvy that reveal for the first time in a single book the true potential of these democratic boats 20 feet and under. Here are the means to understand what can be done, and the way to do it safely, including: how to judge a boat's potential and capabilities based on design and construction; how to rebuild an older boat; how to handle a little boat in big seas, surf, or shallow water; how to navigate; how to read the weather; how to head upriver or offshore; how to trailer your boat; how to manage and equip it for camp cruising on a nearby lake or for subarctic exploration; and how to care for

the boat and motor.

class="MsoNormal">"The dank and sweaty crime scenes in Paris Noir...testify to the fact that the French invented "noir." Among the jarring images in this story collection, Didier Daeninckx's murky view of the after-hours scene in Porte Saint-Denis and Marc Villard's gritty look at the sex trade in Les Halles are correctives to all those persistent romantic fantasies about the city."—New York Times Paris Noir takes you on a ride through the old medieval center of town with its winding streets, its ghosts, and its secrets buried in history. This is more than an homage to the crime genre, to Melville and Godard, it's also a lush introduction to the very best in French fiction. Brand-new stories from: Marc Villard, Didier Daeninckx, Jean-Bernard Pouy, Salim Bachi, Christophe Mercier, Jerome Leroy, DOA, Laurent Martin, Herve Prudon, Patrick Pecherot, Dominique Mainard, and Chantal Pelletier. Aurélien Masson is the director of la Série Noire at Gallimard, one of France's leading publishing companies.
